Introduction

The structure of the Solvency and Financial Condition Report (SFCR) has been prepared as described in annex XX of the Solvency II Directive Delegated Regulation. The subjects addressed are based on article 51 to 56 of the Solvency II Directive and act 292 up to and including 298 and act 359 of the Delegated Regulation. Furthermore, the figures presented in this report are in line with the supervisor's reported Quantitative Reporting Templates (QRT).

All amounts in this report, including the amounts quoted in the tables, are presented in thousands of euros (€ thousand), being the functional currency of ASR Aanvullende Ziektekostenverzekeringen N.V. (hereafter referred to as a.s.r. health supplementary), unless otherwise stated.

Summary

The 2022 SFCR provides a.s.r. health supplementary stakeholders insight in:

A Business and performance

The Solvency II ratio stood at 145% as at 31 December 2021 (31 December 2021: 216%), based on the standard formula as a result of € 25,294 thousand Eligible Own Funds (EOF) and € 17,496 thousand Solvency Capital Requirement (SCR).

Gross written premiums decreased to € 88,014 thousand (2021: € 92,239 thousand). Gross new business was € 7,625 thousand (2021: € 20,876 thousand). Profit before tax 2022 came to € 3,544 thousand (2021 € 9,865 thousand). Operating expenses stood at € 8,240 thousand (2021: € 7,254 thousand).

Full details on the a.s.r. health supplementary's business and performance are described in chapter A Business and performance (page 8).

B System of governance

This paragraph contains a description of group policy, which is applicable for the solo entity.

General

a.s.r. is a public limited company which is listed on Euronext Amsterdam and governed by Dutch corporate law. It has a two-tier board governance structure consisting of an Executive Board (EB) and a Supervisory Board (SB). The EB is responsible for the realisation of corporate objectives, the strategy with its associated risks and the delivery of the results. The SB is responsible for advising the EB, supervising its policies and the general state of affairs relating to a.s.r. and its group entities.

Risk management

It is of great importance to a.s.r. that risks within all business lines are timely and adequately controlled. In order to do so, a.s.r. has a Risk Management framework in place based on internationally recognised and accepted standards (such as COSO ERM and ISO 31000 risk management principles and guidelines). Using this framework, material risks that a.s.r. is, or can be, exposed to, are identified, measured, managed, monitored and evaluated. The framework is applicable to a.s.r. group and the underlying business entities.

Control environment

In addition to risk management, a.s.r.'s Solvency II control environment consist of an internal control system, an actuarial function, a compliance function, a risk management function and an internal audit function. The system of internal control includes the management of risks at different levels in the organisation, both operational and strategic. Internal control at an operational level centres around identifying and managing risks within the critical processes that pose a threat to the achievement of the business line's objectives. The Actuarial Function is responsible for expressing an opinion on the adequacy and reliability of reported technical provisions, reinsurance and underwriting. The mission of the Compliance department is to enhance and ensure a controlled and sound business operation. The Audit Department evaluates the effectiveness of governance, risk management and internal control processes, and gives practical advice on process optimisation.

Full details on the a.s.r. health supplementary's system of governance are described in chapter B System of governance (page 13).

C Risk profile

a.s.r. health supplementary applies an integrated approach in managing risks, ensuring that our strategic goals (customer interests, financial solidity and efficiency of processes) are maintained. This integrated approach ensures that value will be created by identifying the right balance between risk and return, while ensuring that obligations towards our stakeholders are met. Risk management supports a.s.r. health supplementary in the identification, measurement and management of risks and monitors to ensure adequate and immediate actions are taken in the event of changes in a.s.r. health supplementary's risk profile.

a.s.r. health supplementary is exposed to the following types of risks: market risk, counterparty default risk, insurance risk, strategic risk and operational risk. The risk appetite is formulated at both group and legal entity level and establishes a framework that supports an effective selection of risks.

The SCR is build up as follows:

Full details on the a.s.r. health supplementary's risk profile are described in chapter C Risk profile (page 28).

D Valuation for Solvency purposes

a.s.r. health supplementary values its Solvency II balance sheet items on a basis that reflects their economic value. Where the IFRS fair value is consistent with Solvency II requirements, a.s.r. health supplementary follows IFRS for valuing assets and liabilities other than technical provisions.

The reconciliation of IFRS equity and Excess Assets over Liabilities (Solvency II basis) can be summarised for a.s.r. health supplementary as follows:

- derecognition of items on the Solvency II economic balance sheet which are admissible on the IFRS balance sheet, for instance goodwill, pre-paid commissions and other intangible assets;
- revaluation differences on mainly insurance liabilities and other assets which are valued other than fair value in the IFRS balance sheet.

A graphical representation of the reconciliation from Solvency II equity to EOF is presented below:

Reconciliation total equity IFRS vs EOF Solvency II

Full details on the reconciliation between a.s.r. health supplementary's economic balance sheet based on Solvency II and consolidated financial statements based on IFRS are described in chapter D Valuation for solvency purposes (page 43).

E Capital management

Overall capital management is administered at group level. Capital generated by operating units and future capital releases will be allocated to profitable growth of new business or repatriated to shareholders, beyond the capital that is needed to achieve management's targets.

a.s.r. health supplementary has no internal model and follows the default method for the determination of the group solvency. a.s.r. health supplementary maintains an internal minimum and management target for the Solvency II ratio. The internal minimum Solvency II ratio for a.s.r. health supplementary as formulated in the risk appetite statement is 110%. The management threshold level for the Solvency II ratio is above 140%. a.s.r. only distributes cash dividends if the interest of the policyholders has been ensured (i.e. a Solvency II ratio above 125%). The Solvency II ratio was 145% at 31 December 2022.

The EOF are build up as follows:

Eligible own funds

a.s.r. health supplementary has formulated its dividend policy in line with its current strategy. a.s.r. health supplementary intends to pay an annual dividend that creates sustainable long-term value for its shareholders. a.s.r. health supplementary aims to operate at a solvency ratio, calculated according to the standard formula, above the management threshold level of 140%.

Full details on the capital management of a.s.r. health supplementary can be found in chapter E Capital Management (page 50).

A Business and performance

A.1 Business

A.1.1 Profile

Object of the company

ASR Aanvullende Ziektekostenverzekeringen N.V. (a.s.r. health supplementary) provides supplementary insurance to healthcare insurance under the Dutch Healthcare Insurance Act.

a.s.r. health supplementary aims to promote the ambitions and build on the transition to a healthcare business that works for a generation of customers who opt for a healthy and sustainable lifestyle by focusing on client satisfaction and profitable growth of the customer base. a.s.r. health supplementary offers well priced quality products, excellent service and a sustainable brand.

Core activities

The core activity of a.s.r. health supplementary is the provision of supplementary insurance to basic health insurance under the Dutch Healthcare Insurance Act. Basic health insurance is provided by ASR Basis Ziektekostenverzekeringen N.V. (a.s.r. health basic) and long-term care insurance is provided by ASR Wlz-uitvoerder B.V. a.s.r. health basic, a.s.r. health supplementary and ASR Wlz-uitvoerder B.V. form a personnel and administrative union (hereafter referred to as a.s.r. health). At year-end 2022, the number of insured persons of a.s.r. health supplementary amounted to 531,201.

In 2022, the healthcare market was served from two labels. a.s.r. offered health insurance under the a.s.r. and Ditzo brands.

The label a.s.r., focuses mainly on entrepreneurs (SMEs), employees and self-employed workers. Distribution takes place mostly via the intermediary channel. The second label, Ditzo, focuses exclusively through the direct online channel on price-conscious customers who wish to have adequate cover for additional risks.

Legal structure of the company

a.s.r. health supplementary is a wholly-owned subsidiary of ASR Ziektekostenverzekeringen N.V., which in turn is a wholly-owned subsidiary of ASR Nederland N.V. (a.s.r.). a.s.r. is a public limited company under Dutch law having its registered office located at Archimedeslaan 10, 3584 BA in Utrecht, the Netherlands, and registered with the Dutch Chamber of Commerce under number 30070695. a.s.r. has chosen the Netherlands as 'country of origin' ('land van herkomst') for the issued share capital and corporate bonds which are listed on Euronext Amsterdam and the Euronext Dublin. (Ticker: ASRNL).

Internal organisational structure

Internal organisational structure

In 2022, the organisation of a.s.r. health supplementary consisted of the following three divisions: (1) Operations and Information Management, (2) Health and Customer and (3) Finance, Risk and Control. Operations includes the Contact Centre, Client Acceptance, Health Declarations and Receivables Management teams. Information Management includes the Data team, Health Project Management and the Health Service Chain teams. Health and Customer can be subdivided into the Medical Advice Group, Procurement MSZ, Procurement Primary Health, Procurement Policy and the Customer & Proposition team. The segment Finance, Risk and Control includes Health Control, Management support, Strategy, Business Risk Management, Business Actuarial and team Finance.

Headcount

All employees are employed by a.s.r. The a.s.r. employees that work for a.s.r. health supplementary, work for a.s.r. health basic as well as a.s.r. health supplementary and ASR Wlz-uitvoerder B.V. In 2022, a.s.r. health supplementary employed an average of 233 (2021: 211) internal FTEs. In addition, a flexible layer was used, mostly during November/December, when the bulk of new business was acquired. Specific teams were supported by temporary external employees.

The Executive Board (EB) consists of T.P.H. Oremus and J.M. Hendriks. J.D. Lansberg stepped down from the EB as a result of her nomination as director of Disability insurance since April 2022. T.P.H. Oremus is appointed as member of het EB since April 2022. The composition of the Supervisory Board (SB) of a.s.r. health supplementary is as follows: I.M.A. de Swart, G. van Vollenhoven, S. Barendregt and J.P.M. Baeten. The composition of the SB remained unchanged.

Strategy and achievements

a.s.r. health supplementary is ambitious in building on the transition to a healthcare system that supports customers in choosing a healthy and sustainable lifestyle. The range of different health services has increased further in the past year, with the aim of helping and motivating people to take care of their own health. a.s.r. health supplementary wants to accelerate the sustainability transition, among other things, by seeking cooperation with suppliers, healthcare providers, customers and other health insurers.

Several features have been added to the health service offerings to make its policyholders aware of their health throughout the year, and to encourage them to make healthy choices. These healthy choices focus on exercise, sleep and mental health.

In 2022, a.s.r. health supplementary contracted ZorgDomein. This further helps a.s.r. health supplementary to advise customers on the best suitable care. ZorgDomein gives referrers and patients instant insight into whether the chosen care is insured. Policyholders are also directed to a dedicated a.s.r. health supplementary page which provides them with relevant information. This contributes to a.s.r. health supplementary's aim of providing customers with a more proactive service.

Customer contact is an important part of the customer experience, which is why further improvements were pursued and achieved in 2022. One of the goals for 2022 was to make information easier to find so that customers do not have to contact the insurer for simple or self-referential questions. One development that takes this further is the online reimbursement finder, where customers can find out for themselves what the reimbursement is for each insurance policy. A further aim was to create proactive contact, with the customer getting a positive experience during this contact, e.g. notifying them in advance about when they have reached the maximum reimbursement on physiotherapy and dental care. As part of its duty of care, a.s.r. health supplementary is also actively pursuing care mediation, especially with a view to preventing catch-up care following COVID-19.

With an NPS-c score of 49 (2021: 49), a.s.r. health supplementary's customer satisfaction remained stable throughout 2022.

Market and distribution developments

Market

The Dutch health insurance market consists of two product types: basic insurance and supplementary insurances. The market is highly regulated; all Dutch citizens are obliged to take out basic insurance. Basic cover has a limited number of variations across all insurers since it is a statutory compulsory insurance and its conditions/content are prescribed by the government. Although supplementary insurance is not compulsory, 83.5% of the market opted for some form of supplementary health insurance in 2022. Health insurance contracts are concluded on an annual basis. In general, 6-7% of people insured in the Netherlands switch health insurers each calendar year; this has remained relatively stable over the past eight years. In 2022, the number of people switching was 1.2 million, or 6.7%.

Insurers are obliged to accept as policyholders anyone who is legally required to have basic insurance. This is made possible by a government-run system of risk equalisation, which reimburses insurers on a pro-rata basis for expected healthcare costs in their customer base.

Products

The health insurance offerings of a.s.r. health supplementary is related to supplementary health insurance that covers specific risks not covered by basic insurance, such as the cost of dentistry, physiotherapy, orthodontics and medical support abroad.

Internal control of processes and procedures

For a.s.r. health supplementary an adequate risk management system is essential for internal control of processes and procedures, the implementation of the strategy and continuous operational improvement. Risk management includes risk assessment, risk decision making, and implementation of risk controls, which results in acceptance, mitigation, or avoidance of risk. Risks are identified, analysed and mitigated or accepted in line with risk appetite statements. Risk appetite statements are in place to manage the business within the risk profile limits.

The Business Risk Committee (BRC) monitors (on an ongoing basis) and discusses (on a quarterly basis) whether the financial and non-financial risks are adequately managed. If a risk profile exceeds the appetite, the BRC decides on actions to be taken. a.s.r. health supplementary performs comprehensive risk management to increase financial and non-financial, (operational) robustness. The risk control framework for internal control of processes and procedures is based on a risk-based approach. The key risks and key controls are identified annually, and defined and evaluated by the management of a.s.r. health supplementary. The effectiveness of the key controls is tested and reviewed periodically.

Performing annually the Strategic Risk Analysis (SRA), the Own Risk and Solvency Assessments (ORSA), information security assessments of systems, assessments of outsourced services, monitoring operational incidents and project risk assessments is also an important part of risk management. Products and services and accompanying customer information undergo an internal 'Product Approval and Review Process (PARP)'.

In 2022, internal control of processes and procedures with regard to customer due diligence surveys, cybersecurity, adequate supplier risk management and the elaboration of national agreements and regulations with regard to the COVID-19 pandemic received extra attention. Frequent consultation with internal and external cybersecurity experts take place in order to optimise the risk management process and to anticipate on developments and new cybersecurity threats.

Quality control

a.s.r. health supplementary wants to be the personal health insurer focusing on its customers' health (interests) and offering its customers an excellent service. The foundation for this is quality management and a genuine customer interest. Quality management contains policies, guidelines and principles on how a.s.r. health supplementary wants to serve its customers. The standards laid down in the quality policy are the starting point in actively complying with the quality standards for customer-oriented insurance, continuous improvement of processes within all departments and providing training to employees. In order to actively steer towards the objectives, they have been translated into key performance indicators

(KPIs). The progress and results on these KPIs are periodically shared and discussed within the teams working on the objectives and monitored and discussed with management of a.s.r. health supplementary.

a.s.r. health supplementary attaches great importance to feedback from its customers. That is why, in 2022, continuous feedback was asked by means of Net Promoter Score (NPS) on both customer contact (contact measurement) and the handling of complaints (process measurement). In 2021 a.s.r. health supplementary implemented an NPS measurement on Whatsapp. This was done, because more and more customers use Whatsapp as a communication tool.

This gave a.s.r. health supplementary an even better insight into what customers think of its information provision, services, First Time Right service approach and the quality of its customer contact in general. The feedback was used to improve processes and train employees. a.s.r. health supplementary also uses the Customer Effort Score (CES) to get an insight into how much effort the customers must deliver, for example when submitting an invoice. The results have given a.s.r. health supplementary input for improvements. The NPS-c (contact; telephony and Whatsapp) score remained at the same level +49 (2021: +49).

In 2020, a.s.r. health supplementary developed a new customer contact strategy which is aimed at enabling customers to contact us efficiently and effectively in the way and at the moment that suits them best. In 2021 a.s.r. health supplementary had built on this by using the customer feedback on reasons to contact us. In 2022 a.s.r. health basic has implemented a new system to improve customer service. Thanks to the implementation of MSD, we are now able to better record the reasons for contact and link this to our internal data with which we can improve our customer communication.

In addition, a.s.r. health supplementary conducted a number of experiments concerning proactive service. One example is that a.s.r. health supplementary informed customers about the percentage of maximum compensation of specific care they had already used up. This gave customers easy and usable insight.

In 2022, a.s.r. health supplementary saw a decrease in the number of complaints in comparison with 2021. The number of complaint has decreased from 209 in 2021 to 72 in 2022. The decrease is due to the contraction of the portfolio.

Finance

Overall capital management is administered at group level. a.s.r. currently plans to consider investing capital above the Solvency II ratio (calculated based on the standard formula) of 140% (management threshold level) with the objective of creating value for its shareholders. If and when a.s.r. operates at a level considerably above the management threshold level and it believes that it cannot invest this capital in value-creating opportunities for a prolonged period of time, it may decide to return (part of this) capital to shareholders. If a.s.r. chooses to return capital, it plans to do so in a form that is efficient for shareholders at that time. a.s.r. actively manages its in-force business, which is expected to result in free capital generation over time. Additionally, business improvement and balance sheet restructuring should

improve the capital generation capacity while advancing the risk profile of the company. a.s.r. health supplementary is capitalised separately. Excess capital over management's targets and not allocated to profitable growth of new business or other strategic goals, can be used for example to repay earlier capital investments to the extent local regulations allow and within the internal risk appetite statement.

A.1.2 General information

The SFCR has been prepared by and is the sole responsibility of the Company's management. Selected Own Funds and SCR information are also reported in a.s.r. financial statements. KPMG has examined the 2022 financial statements and issued an unqualified audit report thereon. The SFCR is not in scope of the KPMG audit.

Phone number	+31 20 656 7890

A.2 Key figures

- The net result amounted to € 2.6 million (2021: € 7.4 million);
- Gross written premiums decreased to € 88.0 million (2021: € 92.2 million);
- Operating expenses increased to € 8.2 million (2021: € 7.3 million);
- Combined ratio (COR) moved to 95.6% (2021: 89.2%).

Key figures

(in € thousands, unless stated otherwise)	2022	2021
Gross written premiums	88,014	92,239
Operating expenses	-8,240	-7,254
Result before tax from continuing operations	3,544	9,865
Income tax (expense) / gain	-913	-2,464
Net result	2,631	7,401
New business	7,625	20,876
Combined ratio	95.6%	89.2%
- Claims ratio	78.8%	77.4%
- Commission ratio	7.5%	4.0%
- Expense ratio	9.3%	7.8%

Gross new business

Gross new business in 2022 amounted to € 7.6 million, a decrease of 63% compared to 2021. Both labels, Ditzo and a.s.r. showed a decrease in the number of insured persons in 2022. The contraction in the portfolio follows the contraction in basic insurance covering. However, the contraction in supplementary insurance is less than in basic insurance due to the higher retention rate if insured persons have contracted both products. Net contraction amounted to -/€ 6,4 million.

Gross written premiums

Gross written premiums decreased to € 88.0 million (2021: € 92.2 million). The decrease is the result of the contraction of the portfolio.

Operating expenses

Operating expenses amounted to € 8.2 million (2021: € 7.3 million). The costs are higher compared to 2021 because there has been a deliberate decision not to scale down the workforce despite the contraction of the portfolio. In order also to keep the quality high for the service to the 2021 portfolio where growth was achieved. The result is that the expense ratio rises due to higher costs at a declining premium volume.

Profit/(loss) for the year

The net result in 2022 amounted to € 2.6 million, a decrease of € 4.8 million compared to 2021. A lower net underwriting result and higher costs led to a reduction in the result. Compared to 2021, commission costs (€ 3 million) are higher due to the growth of the portfolio in 2023, where 2022 saw a contraction. The claims ratio is higher, partly because the result on previous years is negative in 2022, in contrast to 2021, when there was a profit.

Combined ratio

The COR deteriorated compared to last year as all three ratios deteriorated. The contraction of the

portfolio causes a deterioration in the profile of the policyholders, as a result of which the claims ratio rises. The higher costs with a lower premium volume compared to 2021 causes an increase in the expense ratio. The commission ratio deteriorates due to higher cost of acquisition compared to 2021. The cost of acquisition increased due to a higher growth in number of people insured in 2023.

COVID-19

COVID-19 had no impact on the financial results of a.s.r. health supplementary in 2022.

A.3 Investment performance

a.s.r. health supplementary's investment policy is aimed at striking a balance between generating returns and preventing risks. Protecting the solvency position is an important factor in this context.

A.3.1 Financial assets and derivatives

Investments

	31 December 2022	31 December 2021
Available for sale	20,591	24,141
	20,591	24,141

Breakdown of investments

	31 December 2022	31 December 2021
Fixed income investments		
Government bonds	524	2,319
Corporate bonds	17,413	18,797
Equities and similar investments		
Equities	2,654	3,025
Total investments available for sale	20,591	24,141

Based on their contractual maturity, an amount of € 14,240 thousand (2021: € 16,261 thousand) of fixed income investments is expected to be recovered after more than one year after the balance sheet date.

For assets without a contractual maturity date, it is expected that they will be recovered after more than one year after the balance sheet date.

Investment income

Breakdown of investment income per category

	2022	2021
Interest income from investments	177	142
Other interest income	21	204
Interest income	198	346
Dividend on equities	84	98
Dividend and other investment income	84	98
Total investment income	281	445

The effective interest method has been applied to an amount of € 177 thousand (2021: € 142 thousand) of the interest income from financial assets not classified at fair value through profit or loss.

A.3.2 Consolidated statement of comprehensive income

Consolidated statement of comprehensive income for the year ended 31 December

(in € thousands)	Note	2022	2021
Net result		2,631	7,401
Unrealised change in value of available for sale assets		-1,461	435
Realised gains/(losses) on available for sale assets reclassified to profit or loss		-19	53
Income tax on items that may be reclassified subsequently to profit or loss		360	-117
Total items that may be reclassified subsequently to profit or loss		-1,120	371
Total other comprehensive income, after tax		-1,120	371
Total comprehensive income		1,511	7,772

A.3.3 Information about investments in securities

As a.s.r. health supplementary has no investments in securitisation, no further information is included here.

A.4 Performance of other activities

No other activities are material.

A.5 Any other information

No other information is applicable.

B System of governance

B.1 General information on the system of governance

B.1.1 Corporate governance

a.s.r. health supplementary has an Executive Board (EB) and a Supervisory Board (SB).

Executive Board

The EB is responsible for the company's management, meaning that it is responsible for aspects such as achieving corporate objectives, the strategy and the associated risk profile, and the ensuing financial performance of the company and its subsidiaries.

The General Meeting of Shareholders appoints the members of the EB and may suspend or dismiss any member of the EB at any time. The SB may also suspend any member of the EB. A suspension by the SB may be overruled by the General Meeting of Shareholders at any time. a.s.r. aims to have an adequate and balanced composition of the EB. The EB consisted at the start of 2022 of two members, one female and one male. The woman that was part of the EB left the EB at the 31st of March, and was replaced by a man on the 1st of April. In 2017, the SB adopted a formal diversity policy. a.s.r. uses the following definition for diversity: a balanced composition of the workforce, based on age, gender, cultural or social origin, competences, views and working styles. One of the objectives is an EB consisting of at least 30% women and at least 30% men. The current composition of the EB does not meet both goals regarding the gender balance of the EB.

Supervisory Board

The SB is responsible for overseeing, checking (also proactively) and advising the EB with regard to achieving the corporate objectives, the strategy and the risks associated with the company's business activities.

The SB consists of four members. The General Meeting of Shareholders appoints the members of the SB and may suspend or dismiss any member of the SB at any time.

This paragraph contains a description of group policy, which is applicable for a.s.r. health supplementary. However, a.s.r. health supplementary has its own governance structure, which is described below. a.s.r. health supplementary uses the facilities of the group.

B.1.1.1 Supervisory Board Committees

Audit and Risk Committee

The SB did not institute an Audit and Risk Committee.

Audit and risk issues are discussed during a separate part of every meeting of the SB in the presence of the senior management of the Audit, Risk and Compliance departments.

Remuneration Committee

The SB did not institute a Remuneration Committee.

Selection & Appointment Committee

The SB did not institute a Selection, Appointment and Remuneration Committee.

B.1.1.2 Corporate Governance

a.s.r. health supplementary is a limited liability company. The company has a two-tier board; a SB and an EB. The General Meeting of Shareholders is authorised to appoint and dismiss members of the EB and the SB.

B.1.1.3 Executive Board

The EB is responsible for the day-to-day conduct of business of a.s.r. health supplementary and for the strategy, structure and performance. In performing their duties the EB is guided by a.s.r. health supplementary's interests, which include the interests of the business connected with a.s.r. health supplementary, which, in turn, include the interests of customers, insurers, employees and, in general, the society in which a.s.r. health supplementary's business is carried out. The EB is accountable for the performance of its duties to the SB and to the General Meeting.

Composition

The EB will consist of a minimum of two members. The General Meeting of Shareholders appoints the EB members and may at any time suspend or dismiss any member of the EB. Only candidates found to meet the fit and proper test under the Dutch Financial Markets Supervision Act are eligible for appointment. At the start of 2022 the EB consisted of J.M. Hendriks and J.D. Lansberg. From April 1, the EB consisted of J.M. Hendriks and T.P.H. Oremus.

Education and evaluation

The members of the board followed individual development programs in 2022 as part of their continuing education and development. In addition, much attention was devoted to knowledge-development in the areas of strategic challenges, risk and compliance.

The decision making process of the EB was self-evaluated in 2022 and discussed with the deputy directors. Goal of the evaluation and discussion was to find useful elements and ways to further enhance the effective decision-making and information gathering. In addition to the self-evaluation, the performance of the members of the EB was also assessed by the SB.

B.1.1.4 Supervisory Board

The SB supervises the policy pursued by the EB and the general course of affairs at a.s.r. health supplementary and advises the EB. Specific powers are vested in the SB, including the approval of certain decisions taken by the EB.

Composition

The SB of a.s.r. health supplementary consists of four members: I.M.A. de Swart (chairman), J.P.M. Baeten, S. Barendregt and G. van Vollenhoven. The composition of the SB remained unchanged in 2022.

The SB has drawn up a profile for its size and composition, taking into account the nature of a.s.r. health supplementary's business, its activities and the desired expertise and background of the SB members.

The composition of the SB is such that each supervisory director should have the skills to assess the main aspects of the overall policy and that the SB as a whole meets the profile thanks to a combination of the experience, expertise and independence of the individual supervisory directors. The SB is diverse in terms of the gender and professional background of its members. The diversity of its members ensures the complementary profile of the SB.

Education and evaluation Supervisory Board of the group

In 2022, specific sessions were also organised jointly with the SB of a.s.r. for the benefit of further education. The first session was an explanation of the risk of interest and inflation on the a.s.r. balance. The second session focused on NewCo's Partial Internal Model (PIM). NewCo's Partial Internal Model can be used to calculate the Solvency Capital Requirement.

The SB is responsible for assessing the quality of its own performance. It therefore performs an annual self-assessment and discussion of its own performance and that of its committees and members. A self-assessment with external supervision is carried out every three years. The self-assessment for 2022 was carried out with internal guidance. The assessment was based on written and oral input from the members of the SB, the EB and the Company Secretary. The following aspects were assessed:

- Composition and functioning of the SB (strengths and points for improvement);

- Effectiveness of processes (information-gathering and decision-making);
- Advisory role;
- Role as an employer.

The outcome of the assessment was discussed in a formal meeting of the SB with the EB. Overall, the relation between the SB and EB is experienced as positive and open. The SB is considered a properly functioning group with respect to content, with a balanced and high-quality composition.

B.1.1.5 Corporate Governance Codes and regulations

a.s.r. health supplementary is subject to the Dutch Health Insurers Code (2012). This code contains principles for governance. Specifically, it defines guidelines for the fulfilment of the public responsibility regarding the execution of the compulsory Dutch Health Insurance Act.

Professional oath

On 1 January 2013, the Dutch financial sector introduced a mandatory oath for EB and SB members of financial institutions licensed in the Netherlands. With regard to insurance companies, in addition to the EB and SB members, individuals holding a management position immediately below the EB who are responsible for staff who may have a significant influence on the risk profile of the insurance company, are also required to take the oath, as are certain other employees. This includes individuals who may (independently) significantly influence the risk profile of the undertaking as well as those who are or may be involved in the provision of financial services.

Notwithstanding the above, a.s.r. has decided that all employees and other individuals carrying out activities under its responsibility must take the oath. New employees must take the oath within three months of joining the company.

B.1.2 Related-party transactions

A related party is a person or entity that has significant influence over another entity, or has the ability to affect the financial and operating policies of the other party. Parties related to a.s.r. health supplementary include a.s.r. and its subsidiaries, members of the EB, members of the SB, close family members of any person referred to above, entities controlled or significantly influenced by any person referred to above and any other affiliated entity.

a.s.r. health supplementary regularly enters into transactions with related parties during the conduct of its business. These transactions mainly involve loans and receivables, subordinated liabilities and allocated expenses, and are conducted on terms equivalent to those that prevail in arm's length transactions.

- The remuneration of the EB and SB of a.s.r. health supplementary are described in chapter B.1.4;
- The operating expenses are predominantly intercompany, consisting of allocated expenses from head office, support functions and expenses related to personnel;
- Transactions with a.s.r. concern the payment of taxes as a.s.r. heads the fiscal unity.

Positions and transactions between a.s.r. health supplementary and the related parties

Financial scope of a.s.r.'s related party transactions

	2022	2021
Balance sheet items with related parties as at 31 December		
Loans and receivables	2,949	9,670
Other liabilities	-	13
Transactions in the income statement for the financial year		
Interest income	10	204
Operating expenses	51	179

No provisions for impairments have been recognised on the loans and receivables for the years 2022 and 2021.

The members of the EB of a.s.r. health supplementary have mortgage loans amounting to € 644 thousand (2021: not applicable) with a.s.r. that have been issued subject to normal employee conditions. The employee conditions include limits and thresholds to the amounts that qualify for a personnel interest-rate discount. For mortgage loans higher than € 340 thousand arm's length conditions apply. The average interest rate on the mortgage loans is 2.6% (2021: not applicable). In 2022 the mortgage loans were settled for an amount of € 13 thousand (2021: not applicable).

During 2022, a.s.r. health supplementary paid dividend to a.s.r. health insurance in the amount of € 10 million (2021: nil).

B.1.3 Remuneration of Supervisory Board and Executive Board

The remuneration policy of the EB and SB members is determined in accordance with the current Articles of Association of a.s.r.

B.1.3.1 Remuneration of Supervisory Board members

The EB and SB of a.s.r. health basic are also the EB and SB of a.s.r. health supplementary. The total costs of the EB and SB are allocated for 77,46% (2021: 78.23%) to a.s.r. health basic and 22,54% (2021: 21.77%) to a.s.r. health supplementary.

1 I.M.A. de Swart was appointed member of the Supervisory Board prior January 2021, is still a member of the Supervisory Board and as per 19 May 2021 chairman.

2 J.P.M. Baeten was appointed member of the Supervisory Board prior 1 January 2021 and still a member of the Supervisory Board.

3 S. Barendregt was appointed member of the Supervisory Board prior 1 January 2021 and still a member of the Supervisory Board.

4 G. van Vollenhoven was appointed member of the Supervisory Board as per 6 July 2021 and is still member of the Supervisory Board.

5 C. van der Pol was appointed member of the Supervisory Board prior 1 January 2021, his appointment ended at 19 May 2021.

Annual remuneration for members of the Supervisory Board

Amounts in € thousands		2022	2021
Supervisory Board member	Function		
I.M.A. de Swart ¹	Chairman of the Supervisory Board	-	-
J.P.M. Baeten ²	Member of the Supervisory Board	-	-
S. Barendregt ³	Member of the Supervisory Board	1	1
G. van Vollenhoven ⁴	Member of the Supervisory Board	1	-
C. van der Pol (chairman) ⁵	Member of the Supervisory Board	-	-
Total		2	2

The annual remuneration for the members of the SB is accounted for in the remuneration paragraph of the annual report of a.s.r. In 2022, only the amount of compensation paid for the services provided by the SB members S. Barendregt, and G. van Vollenhoven were charged to a.s.r. health supplementary and is subsequently accounted for in the result of a.s.r. health supplementary. Members of the SB who are also members of the EB of a.s.r. receive no compensation for their services.

B.1.3.2 Remuneration of current and former Executive Board members

The remuneration of members of the EB is in accordance with the 2022 remuneration policy.

Annual remuneration for members of the a.s.r. Executive Board

Amounts in € thousands

Executive Board member	Function	Fixed employee benefits	Pension benefits	Total
2022				
T. Oremus ¹	Member of the Executive Board	43	7	51
J.M. Hendriks RA ²	Member of the Executive Board	50	10	59
J.D. Lansberg ³	Member of the Executive Board	15	3	18
Total		108	20	128
2021				
J.M. Hendriks RA	Member of the Executive Board	42	9	51
J.D. Lansberg	Member of the Executive Board	56	10	66
Total		98	19	117

In 2022, J.M. Hendriks was in function from 1 January 2022 until 31 December 2022, J.D. Landsberg was in function from 1 January 2022 and left on 1 April 2022, T.P.H. Oremus was in function from 1 April 2022 until 31 December 2022. They were in function on a 0.78 FTE basis each. The EB members are employed by a.s.r. The remuneration recognised amounts to the costs charged from a.s.r. to a.s.r. health supplementary for the fulfilment of the function of EB member at a.s.r. health supplementary. The costs charged consist of wage costs including employer's early retirement and life cycle (VPL) costs and any lease car costs.

B.2 Fit and Proper requirements

a.s.r. has a policy that sets out principles and criteria to ensure that persons who effectively run the undertaking and other key functions are fit and proper. The fit and proper policy provides guidance on

¹ Member of the Executive Board since 1 April 2022.

² Member of the Executive Board since 1 April 2015.

³ Member of the Executive Board since 1 September 2016 until 1 April 2022.

the assessment process and contributes to controlled and sound business operations and promotes the stability and integrity of a.s.r. as well as customer confidence.

a.s.r. assesses all employees (internal and external FTEs) for their reliability and integrity prior to their appointment and periodically during the course of employment. This includes persons who effectively run the undertaking and other key functions.

The fit and proper requirements that are imposed on persons who effectively run the undertaking and other key functions are included in the job profile, which is used as a basis for recruitment. Each year, an assessment is made of the extent to which an employee may require additional training. In addition, a.s.r. has a program for the continuing education of persons who effectively run the undertaking and other key functions.

B.3 Risk management system including the Own Risk and Solvency Assessment Risk Management System

It is of great importance to a.s.r. that risks within all business lines are timely and adequately controlled. In order to do so, a.s.r. implemented a Risk Management (RM) framework based on internationally recognised and accepted standards (such as COSO ERM and ISO 31000 RM principles and guidelines). Using this framework, material risks that a.s.r. is, or can be, exposed to, are identified, measured, managed, monitored, reported and evaluated. The RM framework is both applicable to a.s.r. group and the underlying (legal) business entities.

B.3.1 Risk Management Framework

The figure below is the RM framework as applied by a.s.r.

Risk Management framework

The RM framework consists of risk strategy (including risk appetite), risk governance, systems and data, risk policies and procedures, risk culture, and RM process. The RM framework contributes to achieving the strategic, tactical and operational objectives as set out by a.s.r. The overall effectiveness of the RM framework is evaluated as part of the regular internal review of the system of governance.

Risk strategy (incl. risk appetite)

Risk strategy is defined to contain at least the following elements:

- Strategic, tactical and operational objectives that are pursued;
- The risk appetite in pursuit of those strategic, tactical and operational objectives.

a.s.r.'s risk strategy aims to ensure that decisions are made within the boundaries of the risk appetite, as stipulated annually by the EB and the SB (see chapter Risk strategy and risk appetite).

Risk governance

Risk governance can be seen as the way in which risks are managed, through a sound risk governance structure and clear tasks and responsibilities, including risk ownership. a.s.r. employs a risk governance framework that entails the tasks and responsibilities of the RM organisation and the structure of the Risk committees (see chapter Risk governance).

Systems and data

Systems and data support the RM process and provide management information to the risk committees and other relevant bodies. a.s.r. finds it very important to have qualitatively adequate data, models and systems in place, in order to be able to report and steer correct figures and to apply risk-mitigating measures timely. To ensure this, a.s.r. has designed a policy for data quality and model validation in line with Solvency II. Tools, models and systems are implemented to support the RM process by giving guidance to and insights into the key risk indicators, risk tolerance levels, boundaries and actions, and remediation plans to mitigate risks (see chapter Systems and data).

Risk policies and procedures

Risk policies and procedures at least:

- Define the risk categories and the methods to measure the risks;
- Outline how each relevant category, risk area and any potential aggregation of risk is managed;
- Describe the connection with the overall solvency needs assessment as identified in the ORSA, the regulatory capital requirements and the risk tolerances;
- Provide specific risk tolerances and limits within all relevant risk categories in line with the risk appetite statements;
- Describe the frequency and content of regular stress tests and the circumstances that would warrant ad-hoc stress tests.

The classification of risks within a.s.r. is performed in line with, but is not limited to, the Solvency II risks. Each risk category consists of one or more policies or procedures that explicates how risks are identified, measured and controlled within a.s.r. (see chapter Risk policies and procedures).

Risk culture

An effective risk culture is one that enables and rewards individuals and groups for taking risks in an informed manner. It is a term describing the values, beliefs, knowledge, attitudes and understanding about risk. All the elements of the RM framework combined make an effective risk culture.

Within a.s.r. risk culture is an important element that emphasises the human side of RM. The EB has a distinguished role in expressing the appropriate norms and values (tone at the top). a.s.r. employs several measures to increase the risk awareness and, in doing so, the risk culture (see chapter Risk culture).

Risk management process

The RM process contains all activities within the RM processes to structurally 1) identify risks; 2) measure risks; 3) manage risks; 4) monitor and report on risks; and 5) evaluate the risk profile and RM framework. At a.s.r., the RM process is used to implement the risk strategy in the steps mentioned. These five steps are applicable to the risks within the company to be managed effectively (see chapter Risk Management process).

B.3.1.1 Risk management strategy and risk appetite

This paragraph discusses the risk appetite of a.s.r. health supplementary and is derived from the policy document Capital and Dividend Policy of a.s.r. health basic and health supplementary.

a.s.r. health supplementary belongs to the insurance group a.s.r. a.s.r. has a capital and dividend policy that enables the group to steer towards the financial stability of the group in a structured and balanced manner. Under the articles of association, a.s.r. health supplementary has its own responsibility for the capital position. A (limited) transition is therefore necessary in order to make the capital policy of the umbrella group applicable to a.s.r. health supplementary. As far as possible, these choices are made in line with the policy of a.s.r.

The aim of this policy is to establish a stable, consistent and predictable policy for the management of capital within a.s.r. health supplementary in order to promote the company's stability and continuity so as to meet the obligations towards policyholders at all times.

Each year, specific objectives (management target) and risk limits (risk appetite) for the capital position of a.s.r. health supplementary are set by the EB, with the approval of the SB. A solvency objective (management target) reflects the level of solvency sought and contains a reasonable buffer above the internal limits of the risk appetite statement. The difference between the limits of the risk appetite statement and the objectives (management target) is that a limit is very strict and that breaking a limit will have to be remedied immediately, whereas an objective is a long-term target value.

B.3.1.1.1 Substantiation and structure of limits and objectives for the solvency of a.s.r.

The objectives and limits are set annually by the EB of a.s.r. health supplementary based on the principles for capital management as laid down in the capital policy. Under certain circumstances, and with the approval of the SB of a.s.r. health supplementary, substantiated deviations from these principles may be made.

The objectives and limits are agreed with the EB and the SB of a.s.r. in order to ensure the consistency of the capital policy within the group. Of course, this working method does not affect the personal responsibility of the a.s.r. health supplementary. EB members under the articles of association.

B.3.1.2 Risk governance

a.s.r.'s risk governance can be described by:

- risk ownership;
- the implemented three lines of defence model and associated (clear delimitation of) tasks and responsibilities of key function holders; and
- the risk committee structure to ensure adequate decision making.

Risk ownership

The EB of a.s.r. Group has the final responsibility for risk exposures and management within the organisation. Part of the responsibilities have been delegated to persons that manage the divisions where the actual risk-taking takes place. Risk owners are accountable for one or more risk exposures that are inextricably linked to the department or product line they are responsible for. Through the risk committee structure, risk owners provide accountability for the risk exposures.

Three lines of defence

The risk governance structure is based on the 'three lines of defence' model. The 'three lines of defence' model consists of three defence lines with different responsibilities with respect to the ownership of controlling risks. The model below provides insight in the organisation of the three lines of defence within a.s.r.

Three lines of defence		
First line of defence	Second line of defence	Third line of defence
<ul style="list-style-type: none"> • Executive Board • Management teams of the business lines and their employees • Finance & risk decentral 	<ul style="list-style-type: none"> • Group Risk Management department <ul style="list-style-type: none"> - Risk management function - Actuarial function • Integrity department <ul style="list-style-type: none"> - Compliance function 	<ul style="list-style-type: none"> • Audit department <ul style="list-style-type: none"> - Internal audit function
Ownership and implementation	Policies and monitoring implementation by 1st line	Independent assessment of 1st and 2nd lines
<ul style="list-style-type: none"> • Responsible for the identification and the risks in the daily business • Has the day-to-day responsibility for operations (sales, pricing, underwriting, claims handling, etc.) and is responsible for implementing risk frameworks and policies. 	<ul style="list-style-type: none"> • Challenges the 1st line and supports the 1st line to achieve their business objectives in accordance with the risk appetite • Has sufficient countervailing power to prevent risk concentrations and other forms of excessive risk taking • Responsible for developing risk policies and monitoring the compliance with these policies 	<ul style="list-style-type: none"> • Responsible for providing dedicated assurance services and oversees and assesses the functioning and the effectiveness of the first two lines of defence

Positioning of key functions

Within the risk governance, the key functions (compliance, risk, actuarial and audit) are organised in accordance with Solvency II regulation. They play an important role as countervailing power of management in the decision-making process. The four key functions are independently positioned within

a.s.r. In all the risk committees one or more key functions participate. None of the functions has voting rights in the committees, in order to remain fully independent as countervailing power. All functions have direct communication lines with the EB and can escalate to the chairman of the Audit & Risk Committee of the SB. Furthermore, the key functions have regular meetings with the supervisors of the Dutch Central Bank (DNB) and/or The Dutch Authority for the Financial Markets (AFM).

Group Risk Management

Group Risk Management (GRM) is responsible for the execution of the RM function (RMF) and the actuarial function (AF). The department is led by the CRO, which is also the RMF holder. GRM consists of the following sub-departments:

- Enterprise Risk Management;
- Financial Risk Management;
- Model Validation.

As of 1 January 2023, Business Risk Management (BRM) will be hierarchically part of GRM. An important goal for this change is to realise a future proof and efficient RM organisation (regarding the organisation, processes and the execution of non financial risk management) taking into account the impact of the intended acquisition of Aegon Nederland. For the implementation a maximum period of 2-3 years is expected.

Enterprise Risk Management

Enterprise Risk Management (ERM) is responsible for second-line strategic and operational (including IT) RM and the enhancement of the risk awareness for a.s.r. and its subsidiaries. The responsibilities of ERM include the development of risk policies and procedures, the annual review and update of the risk strategy (risk appetite), the coordination of the SRA process leading to the risk priorities and emerging risks and ORSA scenarios and the monitoring of the non-financial risk profile. For the management of operational risks, a.s.r. has a solid Risk-Control framework in place that contributes to its long-term solidity. The quality of the framework is continuously enhanced by the analysis of operational incidents, periodic risk assessments and monitoring by the RMF. ERM actively promotes risk awareness at all levels to contribute to the vision of staying a socially relevant insurer.

Financial Risk Management

Financial Risk Management (FRM) is responsible for the second line financial RM and supports both the AF and RMF. An important task of FRM is to be the countervailing power to the EB and management in managing financial risks for a.s.r. and its subsidiaries. FRM assesses the accuracy and reliability of the market risk, counterparty risk, insurance risk and liquidity risk, risk margin and best estimate liability. As part of the AF, FRM reviews the technical provisions, monitors methodologies, assumptions and models used in these calculations, and assesses the adequacy and quality of data used in the calculations. Furthermore, the AF expresses an opinion on the underwriting policy and determines if risks related to the profitability of new products are sufficiently addressed in the product development process. The AF also expresses an opinion on the adequacy of reinsurance arrangements. Other responsibilities of

financial RM are e.g. monitoring Solvency II compliancy (e.g. changes in Solvency II regulation), updating policies on valuation and risk, activities related to the DNB (National Supervisor), assessment of the ORSA (financial parts), assessment of strategic initiatives.

Model Validation

The Model Validation (MV) department is responsible for performing validation activities or having them carried out in accordance with the drawn up annual model validation plan. MV is responsible for supervising compliance with the model validation policy, discussing and challenging the (draft) validation reports and advising the Model Committee. The MV is a separate sub-department within GRM. The MV is part of the RMF and operates independent of the AF.

Compliance

Compliance is responsible for the execution of the compliance function. An important task of Compliance is to be the countervailing power to the EB and other management in managing compliance risks for a.s.r. and its subsidiaries. The mission of the compliance function is to enhance and ensure a controlled and sound business operation.

As second line of defence, Compliance encourages the organisation to comply with relevant rules and regulations, ethical standards and the internal standards derived from them ('rules') by providing advice and formulating policies. Compliance supports the first line in the identification of compliance risks and assesses the effectiveness of RM on which Compliance reports to the relevant risk committees. In doing so, Compliance uses a compliance risk and monitoring framework. In line with RM, Compliance also creates further awareness to comply with the rules and desired ethical behavior. Compliance coordinates interaction with regulators in order to maintain effective and transparent relationships with those authorities.

Audit

The Audit department, the third line of defence, provides an independent opinion on governance, risk and management processes, with the goal of supporting the EB and other management of a.s.r. in achieving the corporate objectives. To that end, Audit evaluates the effectiveness of governance, risk and management processes, and provides pragmatic advice that can be implemented to further optimise these processes. In addition, senior management can engage Audit for specific advisory projects.

Risk committee structure

a.s.r. health has established a structure of risk committees with the objective to monitor the risk profile in order to ensure that it remains within the risk appetite and the underlying risk tolerances and risk limits. When triggers are hit or likely to be hit, risk committees make decisions regarding measures to be taken, being risk-mitigating measures or measures regarding governance, such as the frequency of their meetings. For each of the risk committees a statute is drawn up in which the tasks, composition and responsibilities of the committee are defined.

Audit and Risk Committee

The SB did not institute an Audit and Risk Committee. Audit and risk issues are discussed during a separate part of every meeting of the SB in the presence of the senior management of the Audit, Risk and Compliance departments.

Executive Board

The EB is collectively responsible for the day-to-day conduct of business at a.s.r. and for its strategy, structure and performance.

Business Risk Committees

The business lines manage and control their risk profile through the Business Risk Committees (BRC). The BRC's monitor that the risk profile of the business lines stays within the risk appetite, limits and targets, as formulated by the EB. The BRC reports to the FRC and the NFRC. The Chairman of the BRC is the Managing Director of the business line.

B.3.1.3 Systems and data

GRC tooling is implemented to support the RM process by giving guidance and insight into the key risk indicators, risk tolerance levels, boundaries and actions and remediation plans to mitigate risks. The availability, adequacy and quality of data and IT systems is important in order to ensure that correct figures are reported and risk mitigating measures can be taken in time. It is important to establish under which conditions the management information that is submitted to the risk committees has been prepared and which quality safeguards were applied in the process of creating this information. This allows the risk committees to ascertain whether the information is sufficient to base further decisions upon.

a.s.r. has a Data Governance and Quality policy in place to support the availability of correct management information. This policy is evaluated on an annual basis and revised at least every three years to keep the standards in line with the latest developments on information management. The quality of the information is reviewed based on the following aspects, based on Solvency II:

- completeness (including documentation of accuracy of results)
- adequacy
- reliability
- timeliness

Adherence to this policy is ensured by the three lines of defence risk governance model. With a new Central Data Office and a Data Quality Improvement Programme, additional measures are taken to increase maturity in data management practices.

The preparatory body or department checks the assumptions made and the plausibility of the results and ensures coordination with relevant parties. When a preparatory body has established that the information is reliable and complete, it approves and formally submits the document(s) to a risk committee.

The information involved tends to be sensitive. To prevent unauthorised persons from accessing it, it is disseminated using a secure channel or protected files. a.s.r.'s information security policy contains guidelines in this respect.

a.s.r.'s information security policy is based on market standards, like ISO 2700x, COBIT 2019, NIST Cybersecurity framework, SOC2 principles, PCI DSS, COSO, BS 25999, ISO 31000, ITIL. These standards describe best practices for the implementation of information security.

There are technical solutions for accomplishing this, by enforcing a layered approach (defence-in-depth) of technical measures to avoid unauthorised persons to compromise a.s.r. data and systems. In this perspective, one may think of methods of logical access management, intrusion detection techniques, in combination with firewalls are aimed at preventing hackers and other unauthorised persons from accessing information stored on a.s.r. systems. Nevertheless, confidential information can also have been committed to paper. On top of technical measures a.s.r. implemented physical measures and measures that help create the desired level of awareness of personnel as part of the information security environment. The resilience of these measures is actively tested.

When user defined models (e.g. spreadsheets) are used for supporting the RM framework, the 'a.s.r. Standard for End user computing' - in addition to the general information security policy - defines and describes best practices in order to guard the reliability and confidentiality of these tools and models. a.s.r. recognises the importance of sound data quality and information management systems. The management of IT and data risks of the implemented tools, models and systems (including data) is part of the Operational IT RM.

B.3.1.4 Risk policies and procedures

a.s.r. has established guidelines, including policies that cover all main risk categories (market, counterparty default, liquidity, underwriting, strategic and operational). These policies address the accountabilities and responsibilities regarding management of the different risk types. Furthermore, the methodology for risk measurement is included in the policies. The content of the policies is aligned to create a consistent and complete set. The risk policy landscape is maintained by GRM and Compliance. These departments also monitor the proper implementation of the policies in the business. New risk policies or updates of existing risk policies are approved by the risk committees as mentioned previously. a.s.r. has drawn up an integrated policy calendar which includes all risk related documents. This guarantees that policies are drawn up and reassessed in a timely manner and that tasks and responsibilities are clear.

B.3.1.5 Risk culture

Risk awareness is a vital component of building a sound risk culture within a.s.r. that emphasises the human aspect in the management of risks. In addition to gaining sufficient knowledge, skills, capabilities and experience in RM, it is essential that an organisation enables objective and transparent risk reporting in order to manage them more effectively.

The EB clearly recognises the importance of RM and is therefore represented in all of the major group level risk committees. Risk Management is involved in the strategic decision-making process, where the company's risk appetite is always considered. The awareness of risks during decision-making is continually addressed when making business decisions, for example by discussing and reviewing risk scenarios and the positive and / or negative impact of risks before finalising decisions.

It is very important that this risk awareness trickles down to all parts of the organisation, and therefore management actively encourages personnel to be aware of risks during their tasks and projects, in order to avoid risks or mitigate them when required. The execution of risk analyses is embedded in daily business in, for example, projects, product design and outsourcing.

In doing so, a.s.r. aims to create a solid risk culture in which ethical values, desired behaviours and understanding of risk in the entity are fully embedded. Integrity is of the utmost importance at a.s.r.: this is translated into a code of conduct and strict application policies for new and existing personnel, such as taking an oath or solemn affirmation when entering the company, and the 'fit and proper' aspect of the Solvency II regulation, ensuring that a.s.r. is overseen and managed in a professional manner.

Furthermore, a.s.r. believes it is important that a culture is created in which risks can be discussed openly and where risks are not merely perceived to be negative and highlight that risks can also present a.s.r. with opportunities. Risk Management (both centralised and decentralised) and Compliance are positioned as such, that they can communicate and report on risks independently and transparently, which also contributes to creating a proper risk culture.

B.3.1.6 Risk management process

The RM process typically comprises of five important steps: 1) identifying; 2) measuring; 3) managing; 4) monitoring and reporting; and 5) evaluating¹. a.s.r. has defined a procedure for performing risk analyses and standards for specific assessments. The five different steps are explained in this chapter.

Identifying

Management should endeavour to identify all possible risks that may impact the strategic, tactical and operational objectives of a.s.r., ranging from the larger and / or more significant risks posed on the overall business, down to the smaller risks associated with individual projects or smaller business lines. Risk

identification comprises of the process of identifying and describing risk sources, events, and the causes and effects of those events.

Measuring

After risks have been identified, quantitative or qualitative assessments of these risks take place to estimate the likelihood and impact associated with them. Methods applicable to the assessment of risks are:

- Sensitivity analysis
- Stress testing
- Scenario analysis
- Expert judgments (regarding likelihood and impact)
- Portfolio analysis

Managing

Typically, there are four strategies to managing risk:

- *Accept*: risk acceptance means accepting that a risk might have consequences, without taking any further mitigating measures.
- *Avoid*: risk avoidance is the elimination of activities that cause the risk.
- *Transfer*: risk transference is transferring the impact of the risk to a third party.
- *Mitigate*: risk mitigation involves the mitigation of the risk likelihood and / or impact.

RM strategies are chosen in a way that ensures that a.s.r. remains within the risk appetite tolerance levels and limits.

Monitoring and reporting

The risk identification process is not a continuous exercise. Therefore, risk monitoring and reporting are required to capture changes in environments and conditions. This also means that RM strategies could, or perhaps should, be adapted in accordance with risk appetite tolerance levels and limits.

Evaluating

The evaluation step is twofold. On the one hand, evaluation means risk exposures are evaluated against risk appetite tolerance levels and limits, taking (the effectiveness of) existing mitigation measures into account. The outcome of the evaluation could lead to a decision regarding further mitigating measures or changes in RM strategies. On the other hand, the RM framework (including the risk management processes) is evaluated by the RM function, in order to continuously improve the effectiveness of the RM framework as a whole.

¹ Based on COSO ERM en ISO 31000.

B.3.2 a.s.r.'s risk categories

a.s.r. is exposed to a variety of risks. There are six main risk categories that a.s.r. recognises, as described below. In addition, a.s.r. recognises sustainability risks arising from environmental, social or governance (ESG) events or conditions. These risks can be financial and non-financial and can be both strategic and operational. This means that all six main risk categories that a.s.r. recognises can be affected by sustainability risks. In chapter 4.9.2 Climate change a.s.r. briefly describes how a.s.r. identifies, measures and manages climate risks and opportunities for its business.

Insurance risk

Insurance risk is the risk that premium and / or investment income or outstanding reserves will not be sufficient to cover current or future payment obligations, due to the application of inaccurate technical or other assumptions and principles when developing and pricing products. a.s.r. recognises the following insurance risks:

- Life insurance risk
- Health insurance risk
- Non-life insurance risk

Market risk

The risk of changes in values caused by market prices or volatility of market prices differing from their expected values. The following types of market risk are distinguished:

- Interest rate risk
- Equity risk
- Property risk
- Spread risk
- Currency risk
- Concentration risk / market concentration risk

Counterparty default risk

Counterparty default risk is the risk of losses due to the unexpected failure to pay or credit rating downgrade of counterparties and debtors. Counterparty default risk exists in respect of the following counterparties:

- Reinsurers
- Consumers
- Intermediaries
- Counterparties that offer cash facilities
- Counterparties with which derivatives contracts have been concluded
- Healthcare providers
- Zorginstituut Nederland

Liquidity risk

Liquidity risk is the risk that a.s.r. is not able to meet its financial obligations to policyholders and other creditors when they become due and payable, at a reasonable cost and in a timely manner.

Operational risk

Operational risk is the risk of losses caused by weak or failing internal procedures, weaknesses in the action taken by personnel, weaknesses in systems or because of external events. The following subcategories of operational risk are used:

- Sustainability
- Business process
- Financial reporting
- Outsourcing
- Information technology
- Project risks

Strategic risk

Strategic risk is the risk of a.s.r. or its business lines failing to achieve the objectives due to incorrect decision-making, incorrect implementation and / or an inadequate response to changes in the environment. Such changes may arise in the following areas:

- Macro-economic
- Climate change and energy transition
- Cyber security
- Pandemics
- Regulation
- Biodiversity
- Social tensions
- Geopolitical instability

Strategic risk may arise due to a mismatch between two or more of the following components: the objectives (resulting from the strategy), the resources used to achieve the objectives, the quality of implementation, the economic climate and / or the market in which a.s.r. and / or its business lines operate.

B.4 Internal control system

B.4.1 Strategic and operational risk management

The system of internal control includes the management of risks at different levels in the organisation, both operational and strategic.

B.4.1.1 Strategic Risk Management

Strategic risk management aims to identify and manage the most significant risks that may impact a.s.r.'s strategic objectives. Subsequently, the aim is to identify and analyse the risk profile as a whole, including risk interdependencies. The process of strategic risk analysis (SRA) is designed to identify, measure, manage, monitor, report and evaluate those risks that are of strategic importance to a.s.r.:

Identifying

Through the SRA process, identification of risks is structurally organised through the combined top-down and bottom-up SRA approach. The SRA outcomes are jointly translated into 'risk priorities' and 'emerging risks', in which the most significant risks for a.s.r. are represented.

Measuring

Through the SRA process, the likelihood and impact of the identified risks are assessed, taking into account (the effectiveness of) risk mitigating measures and planned improvement actions. Information from other processes is used to gain additional insights into the likelihood and impact. One single risk priority can take multiple risks into account. In this manner, the risk priorities provide (further) insights into risk interdependencies.

Managing

As part of the SRA processes, the effectiveness of risk mitigating measures and planned measures of improvement is assessed. This means risk management strategies are discussed, resulting in refined risk management strategies.

Monitoring and reporting

The output of the SRA process is translated into day-to-day risk management and monitoring and reporting, both at group level and product line levels. At group level, the risk priorities are discussed in the a.s.r. risk committee and the Audit & Risk Committee. At the level of the product lines, risks are discussed in the BRC's.

Evaluating

Insights regarding likelihood and impact are evaluated against solvency targets in the SRA process. Based on this evaluation, conclusions are formulated regarding the adequacy of solvency objectives at group and individual legal entity level.

Climate change

One of the areas within Strategic Risk Management concerns climate change. For a.s.r., climate change is a direct and indirect risk, both to its assets and liabilities. In chapter 4.7.3 Identified risks of the Annual report of a.s.r. and 4.9.2 Climate change of the Annual report of a.s.r., the relevant climate related risks for a.s.r. are discussed including how these risks are managed. Climate change related risks have had no direct impact on the valuation in the current accounting and disclosures of a.s.r.'s assets and liabilities.

B.4.1.2 Operational Risk Management

Operational Risk Management (ORM) involves the management of all possible risks that may influence the achievement of the business goals and that can cause financial or reputational damage. ORM includes the identification, analysis, prioritization and management of these risks in line with the risk appetite. The policy on ORM is drafted and periodically evaluated under the coordination of ERM. The policy is implemented in the decentralised business entities under the responsibility of the management boards. A variety of risks is covered by ORM policy: IT, outsourcing, project, reporting etc.

Identifying

With the operational targets as a starting point, each business entity performs risk assessments to identify events that could influence these targets. In each business entity the business risk manager facilitates the periodic identification of the key operational risks. All business processes are taken into account to identify the risks. All identified risks are prioritised and recorded in a risk-control framework.

The risk policies prescribe specific risk analyses to be performed to identify and analyse the risks. For IT systems, Information Security Analyses (DIVA – Dienstverlening en Informatie Veiligheids Analyse) have to be performed and for large outsourcing projects a specific risk analysis is required.

Measuring

All risks in the risk-control frameworks are assessed on likelihood of defaults and impact. Where applicable, the variables are quantified, but often judgments of subject matter experts are required. Based on the estimation of the variables, each risk is labelled with a specific level of concern (1 to 4). Gross risks with a level of concern 3 or 4 are considered 'key'.

Managing

For each risk, identified controls are implemented into the processes to keep the level of risk within the agreed risk appetite (level of concern 1 or 2). In general, risks can be accepted, mitigated, avoided or transferred. A large range of options is available to mitigate operational risks, depending on the type. An estimation is made of the net risk, after implementing the control(s). A more effective and efficient approach to managing risks is required driven by increased complexity of processes, data processing and the need for a timely and accurate view on the risk profile. a.s.r. is therefore in the process of shifting towards a more automated approach to manage risks, for example automated controls and data analysis.

Monitoring and reporting

The effectiveness of operational risk management is periodically monitored by the business risk manager at each business line or legal entity. For each key control in the risk-control framework a testing calendar is established, based on auditing standards. Each control is tested regularly and the outcomes of the effectiveness of the management of key risks are reported to the management board. Outcomes are also reported to the NFRC and a.s.r. risk committee.

Evaluating

Periodically, yet at least annually, the risk-control frameworks and ORM policies are evaluated to see if revisions are necessary. The risk management function also challenges the business lines and legal entities regarding their risk-control frameworks.

Operational incidents

Operational incidents are reported to GRM, in accordance with the operational risk policy. The causes of losses are evaluated in order to learn from these experiences. An overview of the largest operational incidents and the level of operational losses is reported to the NFRC. Actions are defined and implemented to avoid repetition of operational losses.

ICT

Through IT risk management, a.s.r. devotes attention to the confidentiality, integrity and availability of ICT, including End User Computations. The logical access control for key systems used in the financial reporting process remains a high priority in order to enhance the integrity of applications and data. The logical access control procedures also prevents fraud by improving segregation of duties and by offsetting current and desired access levels within the systems and applications. Proper understanding of information, security and cyber risks is essential and the reason for which continuous actions are carried out to create awareness among employees. All of a.s.r.'s security measures are tested periodically. To increase cyberresilience, a.s.r. is participating in de DNB Threat Intel Based Ethical Red Teaming exercise.

Business Continuity Management

Operational management can be disrupted significantly by unforeseen circumstances or calamities which could ultimately disrupt the execution of critical and operational processes. Business Continuity Management enables a.s.r. to resume its daily business with limited interruptions and to react quickly and effectively during such situations.

Critical processes and activities and the tools necessary to use for these processes are identified during the Business Impact Analysis. The factors that can threaten the availability of those tools necessary for the critical processes are identified in the Threat Analysis.

a.s.r. defines a crisis as: one or more business lines are (in danger of being) disrupted in their operations, due to a calamity, or when there is a reputational threat. In order to manage the crisis, and to be able to react timely, efficiently and effectively, a.s.r. has set up a crisis organisation.

There is a central crisis team led by a member of the board. Each business line has their own crisis team led by the director of the business line. The continuity of activities and the systems supporting critical activities are regularly tested and crisis teams are trained annually. The objective of the training is to give the teams insights in how they function during emergencies and to help them perform their duties more effectively during such situations. Some important training scenarios used are scenarios that include cyber threats.

Preparatory Crisis Plan

On 1 January 2019 Dutch legislation entered into force that addresses the recovery and settlement of insurance companies ('Wet herstel en afwikkeling van verzekeraars' in Dutch). The objective is that insurance companies and supervisors are better prepared against a crisis and that insurance companies can recover from a crisis without government aid. a.s.r. is obliged to have a Preparatory Crisis Plan ('Voorbereidend Crisisplan' in Dutch) in place that has been approved by DNB. In 2021 a.s.r. established its Preparatory Crisis Plan. a.s.r.'s Preparatory Crisis Plan helps to be prepared and supports the organisation in various scenarios of extreme financial stress. The Preparatory Crisis Plan describes and quantifies the measures that can be applied to handle a crisis situation and to resume business. These measures are tested in the scenario analysis, in which the effects of each recovery measure on a.s.r.'s financial position (solvency and liquidity) are quantified. The required preparations for implementing the measures, their implementation time and effectiveness, potential obstacles, impact on clients and operational effects are also assessed. The main purpose of the Preparatory Crisis Plan is to increase the chances of early intervention in the event of a financial crisis situation and to further guarantee that the interest of clients and other stakeholders are protected.

Reasonable assurance and model validation

a.s.r. aims to obtain reasonable assurance regarding the adequacy and accuracy of the outcomes of models that are used to provide best estimate values and solvency capital requirements. To this end, multiple instruments are applied, including model validation. Two times a year a model inventory is performed by the productlines to determine if and when a model (re)validation is required. Triggers for model (re)validation are diverse, e.g. regulation, conversions, analysis of change. Materiality is determined by means of an assessment of impact and complexity. Impact and complexity is expressed in terms of High (H), Medium (M), or Low (L). The model inventories are discussed in the Model Committee.

In the pursuit of reasonable assurance, model risk is mitigated and unacceptable deviations are avoided, against acceptable costs.

B.4.2 Compliance function

The Compliance department (Compliance) is a centralised function within a.s.r., headed by the compliance manager for both a.s.r. and the supervised entities. Being part of the second line of defence, Compliance is considered a key function in line with the Solvency II regulation. The CEO bears ultimate responsibility and the compliance manager has a direct reporting line and access to the CEO.

To enhance and ensure a controlled and sound business operation, Compliance is responsible for:

- Encouraging compliance with relevant legislation and regulations, self-regulation, ethical standards and the internal standards derived from them (the rules), by providing advice and stipulating policies;
- Monitoring compliance with the rules;
- Monitoring management of compliance risks by further developing adequate compliance risk management, including, where necessary, advising on business measures and actions;

- Creating awareness of the need to comply with the rules and desired ethical behaviour;
- Coordinating interaction with regulators in order to maintain effective and transparent relationships.

The compliance manager also has an escalation line to the chair of the A&RC and/or the chair of the SB in order to safeguard the independent position of the compliance function and to allow it to operate autonomously.

The compliance manager issues quarterly reports on compliance matters and on the progress made regarding advised business measures and actions at the Group level, supervised entity (OTSO) level and business line level. The quarterly report at the divisional level is discussed with the management responsible, with the relevant Business Risk committees and where applicable with the (A&RC of the) SB. The quarterly report at the Group and OTSO levels is presented to and discussed with the individual members of the Executive Board, with the Non-Financial Risk Committee, with the Risk Committee and with the A&RC of the SB. The report is shared and discussed with Dutch Central Bank (De Nederlandsche Bank; DNB), the Dutch Authority for the Financial Markets (Autoriteit Financiële Markten; AFM), and the internal and external auditors.

Compliance risks

Developments in rules and in the management of (identified) compliance risks and action plans provide the basis for the annual compliance plan and compliance monitoring activities. a.s.r. continuously monitors changing legislation and regulations and assesses their impact on a.s.r. and the corresponding measures to be taken.

In 2022 a.s.r. paid specific attention to:

- Customer Due Diligence (CDD);
- Privacy laws and regulations, including the GDPR. a.s.r. considers it important that personal data are handled with care. More information on this topic can be found in chapter 4.8.2 of the Annual report of a.s.r.;
- Sustainability regulation, such as the SFDR, the EU Taxonomy Regulation and the CSRD. Increasing attention has been given to sustainability and the implementation of regulations as part of the EU Green Deal. Detailed information can be found in chapter 4.9.1 of the Annual report of a.s.r.

Customer Due Diligence (CDD)-related risks (including anti-money laundering) are relevant to a.s.r. Commissioned by the Business Executive Committee (BEC), the Central CDD Review project was launched in 2020 with the following objectives:

- Making the review results of all business units transparent through central recording;
- Strengthened continuous demonstrable compliance with the a.s.r. CDD policy;
- Implementing central management of assessment failures, monitoring and reporting, and establishing (decentralised) knowledge rules regarding the assessments to be performed;

- Establishing the processes required for this, and for governance and its implementation.

Within the investigation department, a central CDD- Ultimate Beneficial Owner (UBO) desk has been set up for the central handling of business customers (e.g. if the UBO cannot be determined automatically and in the case of hits on Politically Exposed Person (PEP) and/or sanction lists). In 2023, a.s.r. will complete the central process handling to identify UBO's. The centralised review of private relationships is also in progress. This process will be completed in 2023.

In addition, a.s.r. has set up a CDD Center that centrally manages compliance with CDD policy and reports centrally on this. The CDD Center has drawn up an action plan to further shape compliance with the relevant laws and regulations. The CDD Center uses the advice of the central desk consisting of Compliance, Investigations, Legal and representatives of the business segments.

a.s.r. monitors sound and controlled business operations, including reputational risks. The framework for monitoring and reviewing is based on the rules, regulations and standards of a.s.r. itself, including the a.s.r. code of conduct. In 2022, a.s.r. monitored compliance with e.g. the rules, regulations and policies on CDD, privacy, remuneration, the digital agenda, sustainability, the product approval and review process, handling of client requests, intra-group outsourcing, and the registration and reporting of data breaches, and the quality of information provided to customers.

In addition, a.s.r. focused in 2022 on further improving ongoing monitoring activities by reviewing the compliance risk and monitoring framework and its translation into the business units' Risk Control Matrix (RCM). Also in 2022, Compliance launched a behaviour and culture pilot on the subject of professional competence. It is the ambition of a.s.r. to increasingly integrate behaviour and culture into its monitoring surveys. Good insight into behaviour and culture, together with the analysis of process design and monitoring, provides an integral picture of the control environment. In addition, behaviour and culture influence the ethical and controlled business operations and are a deciding factor in decision-making. Thus, they become an important part of the compliance monitoring activities. Behaviour and culture studies will be part of the compliance monitoring activities and the monitoring cycle in 2023.

B.5 Internal audit function

The Audit Department provides a professional and independent assessment of the governance, risk management and internal control processes with the aim of aiding management in achieving the company's objectives. This statement of duties has been set down in the Audit Charter for a.s.r. and its subsidiaries. The Audit Department reports its findings to the managing board of a.s.r. health supplementary and, by means of the quarterly management report, to the a.s.r. Business Executive Committee and to the SB of a.s.r. health supplementary.

The Audit Department has an independent position within a.s.r., as set down in the Audit Charter. The SB of a.s.r. guarantees Audit and its employees an independent, impartial and autonomous position in order to execute the mission of Audit. The head of the Audit Department reports to the chairman of the EB of a.s.r. and has a reporting line to the chairman of the SB of a.s.r. health supplementary and to the chairman of the a.s.r. Audit and Risk Committee. The Chief Audit Executive is appointed by the SB of a.s.r. In order to maintain the independence and impartiality of the internal audit function, the audit function is not influenced by the EB of a.s.r. and the managing board of a.s.r. health supplementary in the execution of an audit and the evaluation of and reporting on audit outcomes. The audit function is not subjected to any inappropriate influence from any other function, including the key functions.

The persons carrying out the internal audit function do not assume any responsibility for any other (key) function. The Audit Department has periodic consultations with the supervisors (DNB and AFM) to discuss the risk assessment, findings and audit plan. The department also takes the initiative to organise a 'tripartite consultation' with DNB and the independent external auditor at least once a year. In 2022, at the request of the DNB, no tripartite consultation was held for a.s.r. health supplementary.

The Audit Department sets up a multi-year audit plan based upon an extensive risk assessment. The Audit Department's risk assessment is performed in close consultation with the independent external auditor. The audit plan is approved by the SB of a.s.r. health supplementary and the a.s.r. Audit and Risk Committee. At least once a year, the audit plan is evaluated and any changes to the plan must be approved by the a.s.r. Audit and Risk Committee.

All Audit officers took the oath for the financial sector and are subject to disciplinary proceedings. All Audit officers have committed themselves to the applicable code of conduct of a.s.r., follow the Code of Ethics of the Institute of Internal Auditors (IIA) and comply with the specific professional rules of the Netherlands Institute of Chartered Accountants (NBA) and the professional association for IT-auditors in the Netherlands (NOREA).

Audit applies the standards of the IIA, NBA and NOREA for the profession of internal auditing. Each year, Audit performs a self-assessment and an internal quality review and reports the results to the chairman of the board and to the members of the a.s.r. Audit and Risk Committee. In accordance with the standards of the IIA, an external quality review is performed every five years. During the last review in 2022, Audit was approved by the IIA and received the Institute's quality certificate.

B.6 Actuarial function

The Actuarial Function (AF) is one of four key functions in a.s.r.'s system of governance.

The main tasks and responsibilities of the AF are to:

- coordinate the calculation of technical provisions;

- ensure the appropriateness of the methodologies, underlying models and the assumptions made in the calculation of technical provisions;
- assess the sufficiency and quality of the data used in the calculation of technical provisions;
- compare best estimates against experience;
- inform the administrative, management or supervisory body of the reliability and adequacy of the calculation of technical provisions;
- express an opinion on the overall underwriting policy;
- express an opinion on the adequacy of reinsurance arrangements; and
- contribute to the effective implementation of the risk management system.

The AF is part of the second line of defense and operates independently of both the first line (responsible for determining the technical provisions, reinsurance and underwriting), as well as the other three key functions (internal audit, risk management and compliance).

The AF for both a.s.r. and the insurance legal entities is operationally part of a.s.r. GRM. The AF is performed by persons who have profound knowledge of actuarial and financial mathematics, proportionate to the nature, scale and complexity of the risks present in a.s.r.'s businesses.

There are two function holders. One is responsible for the legal entities in the Life segment (Individual Life & Pensions and Funeral business lines) as well as for the overall Life segment of a.s.r. The other for the entities in the Non-life segment (Property & Casualty, Disability and Health business lines) as well as for the overall Non-life segment of a.s.r.

The AF function is represented in several risk committees. At least annually the AF drafts a formal report, which is discussed with the a.s.r. Risk Committee (or EB) and the a.s.r. Audit & Risk Committee.

Independence of the AF is secured through several measures:

- The AF holders are appointed and dismissed by the Board. Both the appointment and the dismissal of the holders is, together with an advice from the Audit and Risk Committee, submitted to the SB for approval;
- The AF holders have unrestricted access to all relevant information necessary for the exercise of their function;
- The AF holders have a direct reporting line to the a.s.r. Risk Committee or EB and the Audit and Risk Committee of a.s.r. The AF is free to report to one of the management or risk committees when considered necessary;
- The AF is free to report all relevant issues;
- In case of a conflict of interest with the CRO, the function holders may escalate directly to the CEO and to the Chairperson of the Audit & Risk Committee of a.s.r.;
- If the AF is asked to perform tasks that are outside the formal scope described in a charter, the function holder(s) assess if there is a conflict of interest. If so, the AF will not execute the task unless there are sufficient additional measures to mitigate conflicts of interest;

- The Internal Audit Department evaluates periodically the governance of a.s.r. including the (independent) operation of the AF;
- Target setting and assessment of the function holders is done by the CEO taking into account the opinion of the Audit & Risk Committee.

B.7 Outsourcing

a.s.r. has outsourced some of its (operational) activities and/or processes to external service providers, including certain critical and/or important activities that are part of material (operational) processes. Part of the outsourced activities is related to front-, mid- or back office activities of supervised entities within the group. In addition, the management and service of some supporting systems is outsourced.

When activities are outsourced, a.s.r. remains fully accountable for these activities and the processed data and a.s.r. retains full control ('volledige zeggenschap' in Dutch) over the outsourced activities. To manage the risks related to outsourcing, a.s.r. has implemented an outsourcing policy to safeguard controlled and sound business operations which ensures compliance with laws and regulatory requirements. Solid risk management, governance, monitoring and a complete overview of outsourced activities are essential to manage those risks. The outsourcing policy outlines the relevant procedures and is applicable to a.s.r. and its supervised entities. The policy is also applicable to intragroup outsourcing.

To define the respective rights and obligations, a.s.r. drafts and agrees a written outsourcing contract with the service provider. The contract includes amongst others the obligations for all parties involved, commitment to comply with applicable laws and regulatory requirements, right to audit and information security requirements.

Confidentiality, quality of service, and continuity are key for a.s.r. in carrying out its activities. To safeguard the quality of outsourced activities, service providers are carefully examined prior to selection and during the period of service provision. a.s.r. monitors compliancy with the terms of the contract and performance of the outsourced activities. The findings of the monitoring activities serve as input for the regular consultation on operational, tactical and strategic level with the service provider and in case of non-compliance immediate action is taken.

B.8 Any other information

Other material information about the system of governance does not apply.

C Risk profile

Risk management is an integral part of a.s.r. health supplementary's day-to-day business operations. a.s.r. health supplementary applies an integrated approach to managing risks and ensuring that business targets are met. Value is created by striking the right balance between risk, return and capital whilst ensuring that obligations to stakeholders are met. a.s.r. health supplementary's approach to manage risks is described below.

Risk governance

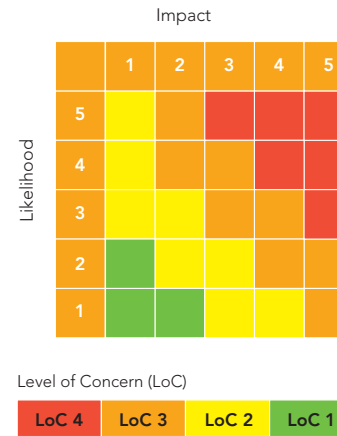

The risks identified are clustered into:

- Strategic risks (including emerging risks);
- Financial risks;
- Non-financial risks.

Management of strategic risks

a.s.r. health supplementary's risk priorities and emerging risks are defined annually by the Executive Board (EB), based on strategic risk analyses. a.s.r.'s risk priorities and emerging risks are defined as the main strategic risks which could materially affect its strategic, financial and non-financial targets. To gauge the degree of risk, a.s.r. uses a risk scale (see image) based on likelihood and impact (Level of Concern). For each risk priority, the degree of risk is determined for the gross and net risks. Gross risk is the degree of risk when no (control) measures are in place. Net risk is the degree of risk with mitigating (control) measures in place. Each of a.s.r.'s risk priorities has a gross and net risk Level of Concern 3 or 4, outside risk appetite boundaries. a.s.r.'s risk priorities and emerging risks are described in Strategic risks and in Emerging risks.

Risk scale

Management of financial risks

a.s.r. health supplementary aims for an optimum trade-off between risk, return and capital. Steering on risk, return and capital is done by decision-making throughout the entire product cycle from the Product Approval & Review Process (PARP) to the payment of benefits and claims. At a more strategic level, decision-making takes place through balance sheet management. A robust solvency position takes precedence over profit, premium income and direct investment income. Risk tolerance levels and limits are disclosed in the financial risk appetite statements (RAS) and are monitored by the Business Risk Committee (BRC) and management. Where appropriate, a.s.r. health supplementary applies additional mitigating measures.

In 2022, the Actuarial Function (AF) performed its regulatory tasks by assessing the adequacy of the Solvency II technical provisions and contributing to the Risk Management Framework (RMF). The AF report on these topics was discussed by the EB, FRC and A&RC.

Management of non-financial risks

Non-financial risk appetite statements (RAS) are in place to manage a.s.r.'s non financial risk profile within the limits. The non financial risk profile and internal control performance is discussed with senior management in the business risk committees each quarter. Should the risk profile exceed the risk appetite, senior management decide on the steps to be taken.

a.s.r. employees gain risk management knowledge and skills through the implementation of risk management policies, procedures and practices and the execution and testing of controls within business processes for sound and controlled business operations. In addition, risk management employees keep their knowledge and skills up to date through training courses - among which in the context of permanent education - that cover specific risk-related topics.

Risk appetite

Risk appetite is defined as the level and type of risk a.s.r. health supplementary is willing to bear in order to meet its targets while maintaining the right balance between risk, return and capital. a.s.r. health supplementary's risk appetite contains a number of qualitative and quantitative RAS and gives direction to the management of both FR and NFR. The statements highlight the organisation's risk preferences and limits and are viewed as key elements for the realisation of a.s.r. health supplementary's strategy.

According to the annual risk management cycle in 2022, to ensure alignment with a.s.r. health supplementary's (risk) strategy, the RAS and RAS limits were evaluated and updated by the EB and approved by the SB.

Identified risks

The risks identified are clustered into:

- Strategic risks (including emerging risks);
- Financial risks;
- Non-financial risks.

Strategic risks

In 2022, a.s.r. health supplementary's risk priorities were:

- Cyber- and information security;
- Insufficient control of competitive purchasing and high healthcare costs lead to higher premiums;
- COVID-19.

Cyber and information security

Technological development results in opportunities and threats through ongoing digitisation and automation at both a.s.r., its IT suppliers, and its customers. IT risks related to cyber, information security, IT outsourcing and data are persistently high, due to a constant threat from cyber criminals and the visible

growth of ransomware attacks. In addition, the use of IT outsourcing (including the use of cloud services), the growing volume of (sensitive) data, the increased use of new applications for digitisation (including the use of data) and automation, increases the importance of IT risk management. Geopolitical tensions are not yet leading to visibly increased criminal activity but are a reason to remain highly vigilant. systems and/or unwanted human actions. Cyber risks increase when IT systems are not secured adequately or unwanted because of the human factor.

a.s.r. monitors and assesses relevant developments of these risks and implements appropriate control measures both internally and at its suppliers.

a.s.r. has implemented a system of measures based on international standards. a.s.r. actively monitors the threat landscape and invests in prevention, detection and response skills and technology to strengthen its cyber resilience so that customers can continue to rely on a.s.r.'s secure digital services. If a.s.r. is hit by a serious comprehensive ransomware attack, only an 'offline backup' can restore business continuity. Due to the time required to investigate the cause of the cyber attack and the time required, the impact is still very high. a.s.r. is taking several other measures, including an information security awareness programme, to improve employee awareness and behaviour towards information security. Specific tooling is used to increase the necessary mindset and skillset, such as Gamification and phishing campaigns.

a.s.r. is actively involved in partnerships with financial institutions and public governing bodies, such as the National Cyber Security Centre, Digital Trust Center, Insurance-ISAC, Insurance-CERT, and the DNB Threat Intel Based Ethical Red-team programme (TIBER-NL). The aim is to share information to improve the financial sector's resilience to cyber risks. Being cyber resilient is important for a.s.r. as it contributes to its customer-oriented strategy. Customer trust is a great asset in this regard, and cyber resilience contributes to this.

a.s.r. informs those affected in case of high risks and/or possible consequences and when those affected are required to take measures to mitigate risks.

Insufficient control of competitive purchasing and high healthcare costs lead to higher premiums

Due to insufficient control of pricing (P) and quantity (Q) of healthcare that is used by our clients, volatility of the customer portfolio with associated discussions with healthcare providers concerning the population for the upcoming year, an unfavourable mix of insured clients and reduced purchasing power, or inflation of healthcare costs and unfavourable directives in the IZA (Integral health agreement), it is possible that the average healthcare costs of a.s.r. health are higher than the national benchmark, resulting in a higher premium than desired.

a.s.r. health supplementary has a set of controls and improvement actions 'Smart Healthcare use' in place to reduce the risks of higher healthcare costs and to offer competing premiums.

COVID-19 arrangements

Whilst COVID-19 was still part of society in 2022, the impact was less disruptive than in 2020 and 2021 due to the less sickening Omicron variant and the effect of vaccination. The aim for 2022 was to return to standard contracting of health care. However, standard contracting has not been realised for 2022 due to the uncertainty related to the upcoming of the Omicron variant at the end of 2021.

Health insurers consider COVID-19 part of the ordinary business operations in 2023. Health care and delayed care as a consequence of COVID-19 are an integral part of regular healthcare contracting for 2023. Solely in a pandemic crisis situation, joint agreements between general hospitals, university medical centers and health insurers remain valid.

Emerging risks

a.s.r. health supplementary's emerging risks are defined by a.s.r. health supplementary as new or existing risks with a potentially major impact, in which the level of risk is hard to define. In 2022, a.s.r. health supplementary's emerging risks were:

- Significant changes in the healthcare system;
- Staff shortage in healthcare;
- Effects of climate change;
- Biodiversity loss and damage to natural ecosystems;
- Changes in society;
- Geopolitical instability.

Significant changes in the healthcare system

The healthcare system is under high pressure, due to the ageing population, staff shortage and higher life expectancy. In order to maintain the accessibility and affordability of health care, significant changes in the healthcare system might have to be implemented. Currently, the direction, either positive or negative, and magnitude of the effect of such changes on a.s.r. is uncertain. a.s.r. health supplementary actively monitors the developments with respect to the healthcare system. In addition, developments are also monitored through Dutch Health insurers (hereafter: ZN).

Staff shortage in healthcare

Due to staff shortage, a situation can evolve where we can no longer comply to the duty of care. The management team of health actively monitors developments in the field (e.g. through 'grip-op-omgeving'). In addition, developments are also monitored through ZN. The strategy of a.s.r. health supplementary is to invest in digital care, in order to limit the chance and impact of this risk.

Effects of climate change

Climate change can result in the onset of new and more common diseases, water-borne diseases and infections. a.s.r. health supplementary monitors the emergence of diseases and the associated market and healthcare costs, and participates through ZN in a consultation group on this subject. In principle,

the financial effect of changes in existing diseases affects the whole market, and will be integrated in the pricing of the premium in the following year. In the current year, the effect is partly mitigated due to risk equalisation.

Biodiversity loss and damage to natural ecosystems

Biodiversity comprises the variety of natural ecosystems that, among other things, help regulate the climate and protect against (the effects of) climate change. As a result of environmental degradation such as air, water and soil pollution and deforestation caused mainly by human action, the quality of ecosystems is deteriorating with irreparable consequences for nature, society and the economy. The effects can be divided into acute and chronic. Estimating the chronic effects and subsequent possible systemic risks is particularly challenging. Missing information on the chronic effects of disturbance in ecosystems plays a role in this context. But these effects are almost certainly negative. Examples include lower food productivity, less healthy crops (nutrient loss) or water shortages.

Biodiversity legislation is under development as a result of the agreements made at the COP15 in Montreal (December 2022). In addition, the topic of biodiversity will be increasingly prominent in questions from stakeholders, benchmarks and ratings. Within a.s.r., our national property portfolio is the most visible in this context: steps are already being taken to encourage leaseholders to produce in more nature-friendly ways.

a.s.r. monitors and assesses relevant developments for possible risks, and implements appropriate control measures.

Developments from biodiversity loss and ecosystem damage are taken into account in the products and services that a.s.r. develops and offers. The actual impact on a.s.r.'s investments, products and services will be mapped by 2024 through application of the Taskforce on Nature-related Financial Disclosures (TNFD) framework. To identify key developments and anticipate them in a timely manner, business units of a.s.r. have formulated responsibilities in governance and participate in various collaborations with third parties.

a.s.r. is committed to making its own investment portfolio more sustainable by increasing its exposure to impact investments. This includes investments in green and sustainable projects and businesses, including investments that have a positive impact on biodiversity. In 2020, a.s.r. signed the Finance for Biodiversity Pledge. By doing so, a.s.r. committed itself to measuring, monitoring and improving its investment impact on biodiversity in a targeted way, for example by setting targets for the end of 2024. Due in part to the limited availability of data, the further development of consistent and widely applied standards for measuring and reporting biodiversity risks is important.

Changes in society

The premium and purchase of healthcare of a.s.r. health supplementary is affected by demographic developments, in particular the aging of the population, a higher demand for care, and increased

prices for treatments and medicines. In addition, high inflation also affects the premium and purchase of healthcare. As a result, salaries, energy costs and costs of materials are rising.

Geopolitical instability

Geopolitical tensions have risen sharply in recent years. There is decreasing interdependence and integration between certain units around the world (deglobalisation). There are conflicts between countries which range from sanctions and protectionist measures to wars and terrorist attacks. These include, for instance, the sharply deteriorating relationship between the West and Russia and trade relations with China. These conflicts could impact, for example, energy prices, inflation and interest rates. Central bank policies and the (in)direct impact of other strategic risks, including the impact of (new) pandemics, can also bring economic uncertainty.

a.s.r. monitors and assesses relevant developments for possible risks and to this end implements appropriate control measures.

Financial risks

Currently, financial risks arise in particular from the war in Ukraine (see also the description under emerging risk 'Geopolitical instability'). There is high inflation that may persist for longer than initially expected. Central banks are raising interest rates to limit inflation. Lower consumer and investor confidence could hurt the real economy. Fears of a global stagflation scenario have increased.

Non-financial risks

In addition to strategic and financial risks, a.s.r. has recognised several non-financial risks. In 2022, the most relevant of these were:

- Outsourcing risk;
- Data quality;
- Agile methodologies.

Outsourcing risk

Outsourcing risk continues to be relevant for a.s.r., especially in view of cyber resilience and growing dependence on suppliers. The risks related to outsourcing are managed and reported as part of the overall operational risk profile. An outsourcing framework is in place to define responsibilities, processes, risk assessments and mandatory controls. In 2022, a.s.r. started the implementation of a database which will increase the oversight of key suppliers. In 2023, a.s.r. aims to expand the available information from this database, as well as the number of connected suppliers. The insight obtained from this database supports the implementation of regulatory developments on suppliers such as CSRD and DORA. Furthermore a.s.r. has drawn up a code of conduct to provide clarity about key principles in the field of sustainable procurement. The code of conduct will be part of contractual agreements from 2023. a.s.r. invites suppliers to work together on solutions that support sustainable business.

Data quality

Sound data quality is important for a.s.r. in relation to financial (including regulatory) reporting (SII, IFRS) and the digital transformation and ambitions it pursues. In this regard, insufficient data quality could pose a threat to the degree to which:

- Processes can be digitised;
- Operations can be made efficient;
- The front-end of business can be transformed;
- Customer and advisory relationships / connections can be enhanced.

As such, a.s.r. health supplementary recognises the importance of sound data quality (both financial and non-financial). To uphold the reliability and confidentiality of its data, a.s.r. has an explicit data quality policy in place defining the data quality (including control) framework and data governance. Adherence to this policy is ensured by the three lines of the defence risk governance model. With a dedicated Central Data Office and a Data Quality Improvement Programme, additional measures are taken to increase maturity in data management practices.

Agile methodologies

As mentioned earlier, digitisation is an important objective for a.s.r. Agility and risk management both drive the rate of change as they coincide in digitising the customer experience. Agility breaks down complexity and delivers focus while risk reduces uncertainty and insures value. a.s.r. shifts from traditional to digital communication channels which changes risk exposure and this leads to policy realignment. On an operational level, digitisation is an enabler to reduce effort in monitoring business processes and to automate risk management controls. At a strategic level, digitisation enables data-driven insight by combining process and customer experience data. The continuous change that digitalisation brings about requires development risks to be integrated in automated pipelines in order to optimise risks without hindering the continuous delivery of business value.

Quantitative description of a.s.r.'s risk priorities

Solvency II sensitivities

The sensitivities of the solvency ratio as at 31 December 2022, expressed as the impact on the a.s.r. health supplementary solvency ratio (in percentage points) are as presented in the table below. The total impact is split between the impact on the solvency ratio related to movement in the available capital and the required capital. The Solvency II ratios presented are not final until filed with the regulators.

Solvency II sensitivities - market risks

Effect on:	Available capital		Required capital		Ratio	
	31 December 2022	31 December 2021	31 December 2022	31 December 2021	31 December 2022	31 December 2021
Scenario (%-point)						
UFR 3.2%	-	-	-	-	-	-
Interest rate +1% (2022 incl. UFR 3.45% / 2021 incl. UFR 3.6%)	-1	-2	-	-	-1	-1
Interest rate -1% (2022 incl. UFR 3.45% / 2021 incl. UFR 3.6%)	+1	+2	-	-	+1	+2
Interest steepening +10 bps	-	-	-	-	-	-
Volatility Adjustment -10bp	-	-	-	-	-	-
Equity prices -20%	-2	-3	+1	+2	-2	-1
Spread +75bps/ VA +18bps (2021: VA +19bps)	-1	-1	-	-	-1	-1

Solvency II sensitivities - explanation

Risk	Scenario
Interest rate risk - UFR 3.2%	Measured as the impact of a lower UFR. For the valuation of liabilities, the extrapolation to the UFR of 3.2% after the last liquid point of 20 years remained unchanged. The impact on available capital, required capital and ratio relates to a comparison with a solvency ratio measured at a UFR of 3.45% for 2022 (3.6% for 2021).
Interest rate risk (incl. UFR 3.45%/3.6%)	Measured as the impact of a parallel 1% upward and downward movement of the interest rates. For the liabilities, the extrapolation to the UFR (3.45% for 2022 and 3.6% for 2021) after the last liquid point of 20 years remained unchanged.
Interest steepening	Measures as the impact of a steepening of the curve of 10 bps between 20Y and 30Y.
Volatility Adjustment	Measured as the impact of a 10 bps decrease in the Volatility Adjustment.
Equity risk	Measured as the impact of a 20% downward movement in equity prices.
Spread risk (including impact of spread movement on VA)	Measured as the impact of an increase of spread on loans and corporate bonds of 75 bps. At the same time, it is assumed that the Volatility Adjustment will increase by 18 bps (2021: +19bps) based on reference portfolio.

The Solvency II sensitivities in 2022 are almost similar to 2021. Furthermore, the magnitude of the Solvency II sensitivities is small, as the insurances are short-cycle.

Expected development UFR

European Insurance and Occupational Pensions Authority (EIOPA) may reduce the ultimate forward rate used to extrapolate insurers' discount curves to better reflect expected inflation and real interest rates. There are various scenarios regarding lowering the Ultimate Forward Rate (UFR).

The UFR will decrease 15 basis points per year. In 2022 the UFR was 3.45% (2021: 3.6%). After the decline of the UFR by 15 basis points the solvency ratio is still above internal solvency objectives.

For a.s.r. health supplementary, changes in the UFR have no effect on the solvency ratio, due to the short duration of the liabilities. The impact on the solvency ratio of various UFR levels is presented below.

Sensitivity Solvency II ratio to UFR

Interest rate sensitivity of Solvency II ratio

The impact of the interest rate on the Solvency II ratio, including the UFR effect, is stated below. The UFR methodology has been applied to the shocked interest rate curve.

Sensitivity Solvency II ratio to interest rate change

Loss absorbing capacity of deferred tax

a.s.r. uses the following methodology for the calculation of the Loss Absorbing Capacity Deferred Tax (LAC DT) benefit in euros of a.s.r. health supplementary.

Relevant regulation and current guidance (Delegated Regulation, Level 3 guidelines, Dutch Central Bank Q&A's and IAS12) are taken into account in the development of the LAC DT methodology.

LAC DT Components

Model sort	ASR Aanvullende Ziektekostenverzekeringen N.V.	
	Available for substantiation	Utilised in applied LAC DT factor
	Base	Base
Component 1 – Taxable profit (t)	✓	✓
Component 2 – Taxable profit (t-1)	✓	✓
Component 3 – Net DTL position	✓	✓
Component 4a – Risk Margin	✓	✗
Component 4b – Future taxable profit	✓	✗

The outcome is an unrounded LAC DT factor.

1. The unrounded LAC DT factor is determined based on component 1 – 3 only.
2. Moreover, an outlook is made of the underpinning of the LAC DT factor in the upcoming quarters, divided over the separate components. This outlook will take into account potential risks not yet included in the model, also called a code of conduct. This code of conduct ensures financial stability in the LAC DT benefit a.s.r. health supplementary in euros, resulting in financial stability of the solvency position of a.s.r. health supplementary.
3. The LAC DT factors and outlook are reviewed by Financial Risk Management.
4. A proposal with the advised LAC DT factors will be presented to the Financial Risk Committee (FRC).

The LAC DT factors agreed with the FRC are to be applied.

To ensure a stable LAC DT factor, a code of conduct is taken into account. An increase is only possible in case it is sustainable and significant. For a.s.r. health supplementary a LAC DT factor of 50% is applicable.

C.1 Insurance risk

Insurance risk is the risk that future insurance claims and benefits cannot be covered by premium and/or investment income, or that insurance liabilities are not sufficient, because future expenses, claims and benefits differ from the assumptions used in determining the best estimate liability. The healthcare sector is part of the non-life portfolio.

The solvency buffer is held by a.s.r. health supplementary to cover the risk that claims may exceed the available insurance provisions and to ensure its solidity. The solvency position of a.s.r. health supplementary is determined and continuously monitored in order to assess if a.s.r. health supplementary meets the regulatory requirements.

a.s.r. health supplementary measures its risks based on the standard model as prescribed by the Solvency II regime. The Solvency Capital Requirement for each insurance risk is determined as the change in own funds caused by a predetermined shock which is calibrated to a 1-in-200-year event. The basis for these calculations are the Solvency II technical provisions which are calculated as the sum of a best estimate and a risk margin.

The insurance risk arising from the health insurance portfolio of a.s.r. health supplementary is as follows.

Insurance risk - required capital

	31 December 2022	31 December 2021
Health insurance risk	16,778	14,109

C.1.1 Health insurance risk

The Health insurance portfolio of a.s.r. health supplementary contains the following insurance risk:

- NSLT Health insurance risk
 - This risk is applicable to the NSLT Health portfolio. The calculation is factor-based. The risk is calculated similar to the Non-Life insurance risk Solvency II standard model.

NSLT Health Risk

Premium and reserve risk

The premium risk is the risk that the premium is not adequate for the underwritten risk. The premium risk is calculated over the maximum of the expected earned premium of the next year, and the earned premium of the current year.

Reserve risk is the risk that the current reserves are insufficient to cover the claims over a 12-month time horizon.

The Health insurance risk at the end of 2022 increased compared to year-end 2021.

Health insurance risk - required capital

	31 December 2022	31 December 2021
Health SLT	-	-
Health Non-SLT	16,778	14,109
Catastrophe Risk (subtotal)	-	-
Diversification (negative)	-	-
Health (Total)	16,778	14,109
Medical expenses insurance and proportional reinsurance	16,778	14,109
Income protection insurance and proportional reinsurance	-	-
Diversification (negative)	-	-
Health Non-SLT (subtotal)	16,778	14,109
Mass accident risk	-	-
Accident concentration risk	-	-
Pandemic risk	-	-
Diversification (negative)	-	-
Catastrophe risk (subtotal)	-	-

For the NSLT Health portfolio, the technical provision at year-end can be broken down as follows under Solvency II:

NSLT Health portfolio - technical provision

	31 December 2022	31 December 2021
Best estimate	-5,634	-5,197
Risk margin	1,192	1,079
Technical provision	-4,442	-4,118

C.1.2 Managing health insurance risk

Health insurance risk is managed by monitoring claims frequency, the size of claims, inflation, handling time, benefit and claims handling costs. Concentration risk also qualifies as an insurance risk.

Claims frequency, size of claim and inflation

To mitigate the risk of claims, a.s.r. health supplementary bases its underwriting policy on claims history and risk models. The policy is applied to each client segment and to each type of activity. In order to limit claims and/or ensure that prices are adjusted correctly, the product line health NSLT also uses knowledge or expectations with respect to future trends to estimate the frequency, size and inflation of claims. The risk of unexpected major damage claims is contained by policy limits.

Handling time

The handling time for health care claims is generally very short and the settlement occurs quickly. Normally, within one to five days a claim is settled.

Benefit and claims handling costs

Taking estimated future inflation into account, benefit and claims handling costs are managed based on regular reviews and related actions.

Concentration risk

Geographically, the risk exposure of a.s.r. health supplementary on its health portfolio is almost entirely concentrated in the Netherlands.

C.2 Market risk

Market risk is the risk of potential losses due to adverse movements in financial market variables. Exposure to market risk is measured by the impact of movements in financial variables such as equity prices, interest rates and property prices. The various types of market risk which are discussed in this section, are:

- interest rate risk
- equity risk
- property risk
- currency risk
- spread risk
- concentration risk

Market risk reports are submitted to the FRC at least once a month. Key reports on market risk include the Solvency II and economic capital report, the interest rate risk report and the report on risk budgets related to the strategic asset mix.

A summary of sensitivities to market risks for the regulatory solvency, total equity and profit for the year is presented in the tables below. The first table summarises the required capital for market risks based on the standard model:

Market risk - required capital

	31 December 2022	31 December 2021
Interest rate	582	334
Equity	955	1,316
Property	-	-
Currency	71	3
Spread	759	811
Concentration	150	141
Diversification (negative)	-778	-574
Total	1,739	2,031

The main market risks of a.s.r. health supplementary are spread and equity risk. This is in line with the risk budgets based on the strategic asset allocation study.

The interest rate risk is the maximum loss of (i) an upward shock or (ii) a downward shock of the yield curve. For a.s.r. health supplementary the upward shock is dominant.

C.2.1 Interest rate risk

Interest rate risk is the risk that the value of assets, liabilities or financial instruments will change due to fluctuations in interest rates. Many insurance products are exposed to interest rate risk; the value of the products is closely related to the applicable interest rate curve. The interest rate risk of insurance products depends on the term to maturity, interest rate guarantees and profit-sharing features. Life insurance contracts are particularly sensitive to interest rate risk. The required capital for interest rate risk is determined by calculating the impact on the available capital due to changes in the yield curve. Both assets and liabilities are taken into account. The interest rate risk is the maximum loss of (i) an upward shock or (ii) a downward shock of the yield curve according to the prescribed methodology. a.s.r. applies a look-through approach for investment funds to assess the interest rate risk.

The interest rate risk is calculated by a relative shock up- and downward shock of the risk-free (basis) yield curve. All adjustments (credit spread, volatility adjustment) on this yield curve are considered constant. The yield curve is extrapolated to the UFR. The yield curve after shock is not extrapolated again to the UFR.

The used shocks vary by maturity and the absolute shocks are higher for shorter maturities (descending: 75% to 20% and ascending: -70% to -20%):

- the yield curve up shock contains a minimum shock of 100bps;
- the yield curve after the downward shock is limited to zero (no negative interest rates);
- the yield curves of all currencies are shocked simultaneously.

Interest rate risk - required capital

	31 December 2022	31 December 2021
SCR interest rate risk up	-582	-334
SCR interest rate risk down	-	-
SCR interest rate risk	582	334

a.s.r. health supplementary has assessed various scenarios to determine the sensitivity to interest rate risk. The impact on the solvency ratio is calculated by determining the difference in the change in available and required capital.

Solvency II sensitivities - interest rate

Effect on: Scenario (%-point)	Available capital		Required capital		Ratio	
	31 December 2022	31 December 2021	31 December 2022	31 December 2021	31 December 2022	31 December 2021
UFR 3.2%	-	-	-	-	-	-
Interest rate +1% (2022 incl. UFR 3.45% / 2021 incl. UFR 3.6%)	-1	-2	-	-	-1	-1
Interest rate -1% (2022 incl. UFR 3.45% / 2021 incl. UFR 3.6%)	+1	+2	-	-	+1	+2
Interest steepening +10 bps	-	-	-	-	-	-
Volatility Adjustment -10bp	-	-	-	-	-	-

Interest rate risk is managed by aligning fixed-income investments to the profile of the liabilities. Among other instruments, swaptions and interest rate swaps are used for hedging the specific interest rate risk arising from interest rate guarantees and profit sharing features in life insurance products.

An interest rate risk policy is in place for the Group as well as for the registered insurance companies. All interest rate- sensitive balance sheet items are in scope, including the employee benefit obligations of the Group. In principle, the sensitivity of the solvency ratio to interest rates is minimised. In addition, the exposure to interest rate risk or various term buckets is subject to maximum amounts.

C.2.2 Equity risk

The equity risk depends on the total exposure to equities. In order to maintain a good understanding of the actual equity risk, a.s.r. applies the look through approach for investment funds to assess the equity risk.

The required capital for equity risk is determined by calculating the impact on the available capital due to an immediate drop in share prices. Both assets and liabilities are taken into account. Stocks listed in regulated markets in countries in the EEA or OECD are shocked by 39% together with the symmetric adjustment of the equity capital charge (type I). Stocks in countries that are not members of the EEA or OECD, unlisted equities, alternative investments, or investment funds in which the look-through principle is not possible, are shocked by 49% together with the symmetric adjustment of the equity capital charge (type II).

a.s.r. applied the transitional measure for equity risk for shares, which came to an end at 31 December 2022.

Equity risk - required capital

	31 December 2022	31 December 2021
SCR equity risk - required capital	955	1,316

The 2022 SCR equity risk decreased with € 361 thousand. This decrease is mainly the result of lower share prices which leads to a lower SCR equity risk, but due to a decreased exposure to equities and also due to a lower risk charge as a result of symmetric adjustment. Besides the impact of decreased share prices, SCR equity risk slightly increased due to the run-off of the transitional measure of equity risk.

Solvency II sensitivities - equity prices

Effect on: Scenario (%-point)	Available capital		Required capital		Ratio	
	31 December 2022	31 December 2021	31 December 2022	31 December 2021	31 December 2022	31 December 2021
Equity prices -20%	-2	-3	+1	+2	-2	-1

Composition of equity portfolio

The fair value of equities and similar investments at year-end 2022 was € 2,654 thousand (2021: € 3,025 thousand). The decrease in 2022 was mainly due to the negative returns on the equity markets.

Composition of equity portfolio

	31 December 2022	31 December 2021
Mature Markets (euro)	2,452	2,792
Dutch Participations	202	233
Total	2,654	3,025

C.2.3 Property risk

Property risk is not applicable for a.s.r. health supplementary.

C.2.4 Currency risk

Currency risk measures the impact of losses related to changes in currency exchange rates. The table below provides an overview of all currencies with exposure on liabilities and the currencies with the largest exposures. a.s.r. health supplementary has only currency risk to insurance products in American dollars (USD). In 2021 a.s.r. implemented a new hedge policy for currency risk. For different investment categories a.s.r. has defined a target hedge ratio.

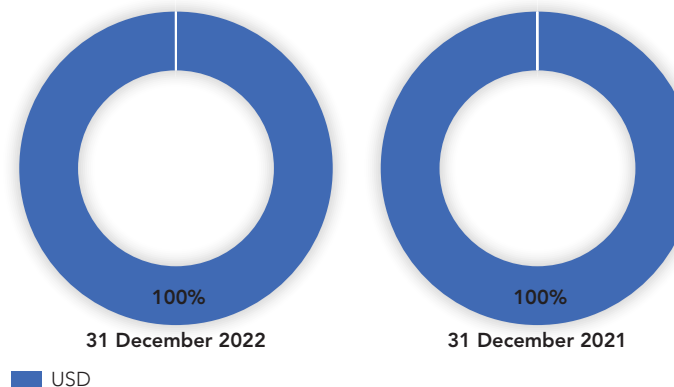

The required capital for currency risk is determined by calculating the impact on the available capital due to a change in exchange rates. Both assets and liabilities are taken into account and a look-through approach is applied for investment funds. For each currency the maximum loss due to an upward and a downward shock of 25% is determined.

Currency risk - required capital

	31 December 2022	31 December 2021
SCR currency risk - required capital	71	3

Currency risk has increased by € 68 thousand, but is still very limited.

Composition currency portfolio

C.2.5 Spread risk

Spread risk arises from the sensitivity of the value of assets and liabilities to changes in the level of credit spreads on the relevant risk-free interest rates. a.s.r. has a policy of maintaining a well-diversified high-quality investment grade portfolio while avoiding large risk concentrations. Going forward, the volatility in spreads will continue to have possible short-term effects on the market value of the fixed income portfolio. In the long run, the credit spreads are expected to be realised and to contribute to the growth of the own funds.

The required capital for spread risk is determined by calculating the impact on the available capital due to the volatility of credit spreads over the term structure of the risk-free rate. The required capital for spread risk is equal to the sum of the capital requirements for bonds, structured products and credit derivatives. The capital requirement depends on (i) the market value, (ii) the modified duration and (iii) the credit quality category.

Spread risk - required capital

	31 December 2022	31 December 2021
SCR spread risk - required capital	759	811

The SCR spread risk decreased in 2022 due to the increased interest rates, which resulted lower bond values.

Solvency II sensitivities - spread risk

Effect on:	Available capital		Required capital		Ratio	
	31 December 2022	31 December 2021	31 December 2022	31 December 2021	31 December 2022	31 December 2021
Scenario (%-point)						
Spread +75bps/(2022: VA +18bps/2021: VA +19bps)	-1	-1	-	-	-1	-1

Composition of fixed income portfolio

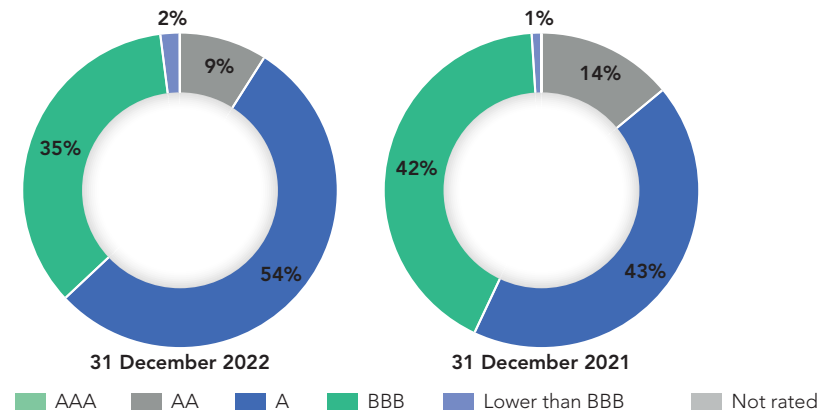

Spread risk is managed on a portfolio basis within limits and risk budgets established by the relevant risk committees. Where relevant, credit ratings provided by the external rating agencies are used to determine risk budgets and monitor limits. A limited number of fixed-income investments do not have an external rating. These investments are generally assigned an internal rating. Internal ratings are based on methodologies and rating classifications similar to those used by external agencies. The following tables provide a detailed breakdown of the fixed-income exposure by (i) rating class and (ii) sector. Assets in scope of spread risk are, by definition, not in scope of counterparty default risk.

The total exposure of assets in scope of spread risk is € 18,056 thousand (2021: € 21,209 thousand).

Composition of fixed income by sector portfolio

Composition of fixed income portfolio by rating

C.2.6 Market risk concentrations

Concentrations of market risk constitute an additional risk to an insurer. Concentration risk is the concentration of exposures to the same counterparty. Other possible concentrations (region, country, etc.) are not in scope. The capital requirement for concentration risk is determined in three steps:

1. determine the exposure above threshold. The threshold depends on the credit quality of the counterparty;
2. calculation of the capital requirement for each counterparty, based on a specified factor depending on the credit quality;
3. aggregation of individual capital requirements for the various counterparties.

According to the spread risk module, bonds and loans guaranteed by a certain government or international organisation are not in scope of concentration risk. Bank deposits can be excluded from concentration risk if they fulfil certain conditions.

Concentration risk - required capital

	31 December 2022	31 December 2021
SCR concentration risk - required capital	150	141

The required capital for market risk concentration increased by € 9 thousand, resulting in € 150 thousand per year-end 2022. The value of the total investments in scope of market concentration risk has decreased

(€ -3,523 thousand) per year-end 2022. The lower base of asset under management results in a lower threshold from which the concentration risk is determined.

a.s.r. continuously monitors exposures in order to avoid concentrations in a single obligor outside of the risk appetite and has an overall limit on the total level of the required capital for market risk concentrations. The calculation of the market risk concentrations applies to the total investment portfolio, where, in line with Solvency II, government bonds are not included.

C.3 Counterparty default risk

Counterparty default risk reflects possible losses due to unexpected default or deterioration in the credit standing of counterparties and debtors. Counterparty default risk affects several types of assets:

- mortgages
- savings-linked mortgage loans
- derivatives
- reinsurance
- receivables
- cash and deposits

Assets that are in scope of spread risk are, by definition, not in scope of counterparty default risk and vice versa.

The Solvency II regime makes a distinction between two types of exposures:

- Type 1: These counterparties generally have a rating (reinsurance, derivatives, current account balances, deposits with ceding companies and issued guarantee (letter of credit). The exposures are not diversified.
- Type 2: These counterparties are normally unrated (receivables from intermediaries and policyholders, mortgages with private individuals or SMEs). The exposures are generally diversified.

The total capital requirement for counterparty default risk is an aggregation of the capital requirement for type 1 exposure and the capital requirement for type 2 exposure by taking 75% correlation.

Counterparty default risk - required capital

	31 December 2022	31 December 2021
Type 1	485	211
Type 2	84	88
Diversification (negative)	-18	-16
Total	552	283

The increase of Type 1 risk is the result of the increase of the cash position. The total Counterparty risk has increased by € 269 thousand.

C.3.1 Mortgages

a.s.r. health supplementary has no mortgages on the balance sheet.

C.3.2 Savings-linked mortgage loans

a.s.r. health supplementary has no saving loans on the balance sheet.

C.3.3 Derivatives

a.s.r. health supplementary has no material derivatives on the balance sheet.

C.3.4 Reinsurance

a.s.r. health supplementary has not entered into any reinsurance contracts.

C.3.5 Receivables

The receivables amounted to € 468 thousand per year-end 2022 (2021: € 587 thousand).

Composition receivables

	31 December 2022	31 December 2021
Policyholders	1,031	1,056
Other	-563	-469
Total	468	587

Other includes impairment of loans and receivables of € -602 thousand per year-end 2022 (2021: € -559 thousand).

C.3.6 Cash and cash equivalents

The current accounts amounted € 5,686 thousand in 2022 (2021: € 3,012 thousand).

Composition cash accounts by rating

	31 December 2022	31 December 2021
AAA	0	0
AA	0	0
A	5,686	3,012
Lower than A	0	0
Total	5,686	3,012

C.4 Liquidity risk

Liquidity risk is the risk that a.s.r. health supplementary is not able to meet its financial obligations to policyholders and other creditors when they become due and payable, at a reasonable cost and in a timely manner. Liquidity risk is not quantified in the SCR of a.s.r. health supplementary, and is therefore separately discussed here.

a.s.r. health supplementary recognises different levels of liquidity management. First, short-term liquidity management which covers the day-to-day cash requirements and aims to meet short term liquidity risk targets. Second level covers the long-term liquidity management. This, among others, considers the strategic matching of liquidity & funding needs in different business conditions in which market liquidity risk could materialize. Finally stress liquidity management refers to the ability to respond to a potential crisis situation as a result of a market event and/or an a.s.r.-specific event.

Due to rising interest rates in 2022, a.s.r. experienced liquidity outflow as a result of cash variation margin outflow related to the ISDA/CSA- and Clearing agreements of derivatives. The cash outflow was financed by returning earlier received cash collateral to counterparties. As at 31 December 2022 a.s.r. remained a net receiver of cash collateral. Other sources of liquidity risk are (unexpected) lapses in the insurance portfolios and catastrophe risk. a.s.r. monitors its liquidity risk via different risk reporting and monitoring processes including cash management reports, cash flow forecasts and liquidity dashboards in which liquidity outflows are calculated for different stress scenarios. For long-term liquidity management purposes, liquidity is also taken into account in the asset allocation process.

a.s.r. health supplementary's liquidity management principle consists of three components. First, a well-diversified funding base in order to provide liquidity for cash management purposes. A portion of assets must be held in cash and invested in unencumbered marketable securities so it can be used

for collateralised borrowing or asset sales. In order to cover liquidity needs in stress events a.s.r. health supplementary has committed repo-facilities in place to ensure liquidity under all market circumstances. Second, the strategic asset allocation should reflect the expected and contingent liquidity needs of liabilities. Finally, an adequate and up-to-date liquidity policy and contingency plan are in place to enable management to act effectively and efficiently in times of crisis.

In managing the liquidity risk from financial liabilities, a.s.r. health supplementary holds liquid assets comprising cash and cash equivalents and investment grade securities for which there is an active and liquid market. These assets can be readily sold to meet liquidity requirements. As at 31 December 2022, a.s.r. health supplementary had cash (€ 5,686 thousand), liquid government bonds (€ 525 thousand) and other bonds and shares. Furthermore a.s.r. health supplementary has access to multiple committed cash facilities and an unsecured revolving credit facility in order to meet its liquidity needs in times of stress.

The following table shows the contractual cash flows of liabilities (excluding insurance contracts on behalf of policyholders) broken down in four categories. For liabilities arising from insurance contracts, expected lapses and mortality risk are taken into account. Profit-sharing cash flow of insurance contracts is not taken into account, nor are equities, property and swaptions.

Contractual cashflows

	Payable on demand	< 1 years	1-5 years	5-10 years	> 10 years	Carrying value
31 December 2022						
Insurance liabilities	-	-10,845	5,310	-	-	4,214
Derivatives liabilities	-	7	-	-	-	7
Financial liabilities	-	5,630	59	-	-	5,689
Future interest payments	-	-	-	-	-	-
Total	-	-5,208	5,369	-	-	9,911

	Payable on demand	< 1 years	1-5 years	5-10 years	> 10 years	Carrying value
31 December 2021						
Insurance liabilities	-	-9,606	4,412	-	-	3,563
Derivatives liabilities	-	25	-	-	-	24
Financial liabilities	-	2,455	59	-	-	2,514
Future interest payments	-	-	-	-	-	-
Total	-	-7,126	4,471	-	-	6,101

When the amount payable is not fixed the amount reported is determined by reference to the conditions existing at the reporting date.

Financial liabilities payable on demand include the liability recognised for cash collateral received under ISDAs, concluded with counterparties. The related cash collateral received is recognised as cash and cash equivalents, and not part of the liquidity risk exposure table.

EPIFP

The expected profit included in future premiums (EPIFP) means the expected present value of future cash flows which result from the inclusion in technical provisions of premiums relating to existing insurance and reinsurance contracts that are expected to be received in the future, but that may not be received for any reason, other than because the insured event has occurred, regardless of the legal or contractual rights of the policyholder to discontinue the policy.

EPIFP		
	31 December 2022	31 December 2021
EPIFP	9,251	8,320

The EPIFP per 31 December 2022 for a.s.r. health supplementary increased to € 9,251 thousand (2021: € 8,320 thousand) mainly due to an increase in the amount of insurance contracts.

C.5 Operational risk

Operational risk concerns the risk of direct and / or indirect losses which can occur within a.s.r. as a result of inadequate or failing (changing) internal processes, people, systems and/or as a result of external

events. Operational risks occurred are most times being caused by the failure of processes, people, systems, external events or a combination of these factors.

Operational risk - required capital

	31 December 2022	31 December 2021
SCR operational risk - required capital	2,637	2,767

The SCR for operational risk amounts to € 2,637 thousand at the end of 2022 and is determined with the standard formula under Solvency II. The operational risk is based on the basic solvency capital requirement, the volumes of premiums and technical provisions, and the amount of expenses.

C.6 Other material risks

As part of the regular ORSA process, the overall risk profile and associated solvency capital needs are assessed against a.s.r.'s actual solvency capital position. The most important risks to which a.s.r. is exposed, including risks that are not incorporated into the standard formula, are identified through a combined top-down (strategic risk assessment) and bottom-up (control risk self-assessments) approach. After assessment of the effectiveness of the mitigating measures, the risks with the highest 'Level of Concern' (LoC) are translated to the a.s.r. risk priorities and relevant risk scenarios for the ORSA. The following risks, outside the scope of the standard formula, are recognised by a.s.r. as being potentially material:

- Inflation risk;
- Reputation risk;
- Liquidity risk;
- Contagion risk;
- Legal environment risk;
- Model risk;
- Risks arising from non-insurance activities (non-OTSOs);
- Strategic risk;
- Climate risk and sustainability risk;
- Emerging risk;
- Environmental, Social & Governance (ESG) risk.

As part of the appropriateness assessment of the standard formula mitigating measures regarding these risks are identified and evaluated.

C.7 Any other information

C.7.1 Description of off-balance sheet positions

Not applicable for a.s.r. health supplementary.

C.7.2 Reinsurance policy and risk budgeting

C.7.2.1 Reinsurance policy

a.s.r. health supplementary does not reinsure any specific underwriting risk at this moment.

C.7.2.2 Risk budgeting

The FRC assesses the solvency position and the financial risk profile on a monthly basis. Action is taken where appropriate to ensure the predefined levels in the risk appetite statement will not be violated.

C.7.3 Monitoring of new and existing products

Group Risk Management, Compliance, and Legal Affairs participate in the Product Approval and Review Process Board. All these departments evaluate whether risks in newly developed products are sufficiently addressed. New products need to be developed in a way that they are cost efficient, reliable, useful and secure for the client. New products must also be strategically aligned with a.s.r.'s mission to be a solid and trustworthy insurer. In addition, the risks of existing or modified products are evaluated, as requested by the PARP, as a result of product reviews.

C.7.4 Prudent Person Principle

a.s.r. complies with the prudent person principles as set out in Directive 2009/138/EC/article 132:

Prudent person principle. The prudent person principle ensures that assets are managed on behalf of its subsidiaries, policyholders or other stakeholders in a prudent manner, and covers aspects that relate to market, credit, liquidity and operational risk. a.s.r. has mandated ASR Vermogensbeheer N.V. as their asset manager.

a.s.r. ensures that assets of policyholders or other stakeholders are managed in a prudent manner. a.s.r. complies with the Prudent Person Principle by investing only in assets and instruments which a.s.r. can adequately assess, measure, monitor, control, maintain and report the risks. All assets will be assessed against solvency criteria according to article 45 (1a).

Derivatives are only used when these contribute to a lower risk or when it can be used to manage/hedge the portfolio more efficient. Mortgages, real estate and illiquid assets, which are not traded on regulated financial markets, are limited to a prudent level.

Governance of Investments

Within the Three Lines-of-Defence model, investments are managed in the first line by ASR Vermogensbeheer NV, reporting to the CFO of a.s.r.

ASR Vermogensbeheer NV manages its investments within the boundaries of a.s.r.'s Risk Appetite Framework, Strategic Asset Allocation and its Market-Risk Budget. The Market-Risk Budget is calculated on a monthly basis by Group Balance Sheet Management (GBSM), taking into account the Risk Appetite Framework. GRM, acting as the second line of defence, is responsible for the review. Internal Audit acts as the third-line of defence.

a.s.r. has established a structure of risk committees with the objective to monitor the risk profile for a.s.r. group, its legal entities and its business lines in order to ensure that it remains within the risk appetite and the underlying risk tolerances and risk limits. When triggers are hit or likely to be hit, risk committees make decisions regarding measures to be taken, being risk-mitigating measures or measures regarding governance, such as the frequency of their meetings.

All investment related activities are performed according to mandates as set by a.s.r., clients or policyholders. Mandates for investments for own account, clients and for account of policyholders are set out in internal guidelines, in order to ensure that prudent person principles are satisfied. This should always be in line with internal policies and internal constraints (such as a.s.r.'s ESG policy) and external constraints (such as regulatory limits).

D Valuation for Solvency purposes

This chapter contains information regarding the valuation of the balance sheet items. For each material asset class, the bases, methods and main assumptions used for valuation for solvency purposes are described. Separately for each material class of assets a quantitative and qualitative explanation of any material difference between the valuation for solvency purposes and valuation in the financial statements. When accounting principles are equal or when line items are not material, some line items are clustered together.

Valuation of assets is based on fair value measurement as described below. Each material asset class is described in paragraph D.1. Valuation of technical provisions is calculated as the sum of the best estimate and the risk margin.

This is described in paragraph D.2. Other liabilities are described in paragraph D.3.

Information for each material line item is based on the balance sheet below. For each line item is described:

- Methods and assumptions for valuation;
- Difference between solvency valuation and valuation in the financial statements.

The numbering of the line items refers to the comments below.

Based on the differences in this template a reconciliation is made between IFRS equity and Solvency equity for 2022.

Reconciliation IFRS balance sheet and Solvency II balance sheet

D.1 Assets

Valuation of most financial assets is based on fair value. In the paragraph below, this valuation methodology is described.

For different line items will be referred to this method. In this paragraph line items 1 – 15 from the simplified balance sheet above are described.

D.1.1 Fair value measurement

In accordance with the Delegated Regulation, Solvency II figures are based on fair value. In line with the valuation methodology described in article 75 and further of the Delegated Regulation and articles 9 and 10, the following three hierarchical levels are used to determine the fair value of financial instruments and non-financial instruments when accounting for assets and liabilities at fair value: Level 1: Fair value based on quoted prices in an active market. Level 1 includes assets and liabilities whose value is determined by quoted (unadjusted) prices in the primary active market for identical assets or liabilities.

A financial instrument is quoted in an active market if:

- Quoted prices are readily and regularly available (from an exchange, dealer, broker, sector organisation, third party pricing service, or a regulatory body); and
- These prices represent actual and regularly occurring transactions on an arm's length basis.

Financial instruments in this category primarily consist of bonds and equities listed in active markets. Cash and cash equivalents are also included as level 1.

Level 2: Fair value based on observable market data

Determining fair value on the basis of Level 2 involves the use of valuation techniques that use inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly (that is, as prices) or indirectly (that is derived from prices of identical or similar assets and liabilities). These observable inputs are obtained from a broker or third party pricing service and include:

- Quoted prices in active markets for similar (not identical) assets or liabilities;
- Quoted prices for identical or similar assets or liabilities in inactive markets;
- Input variables other than quoted prices observable for the asset or liability. These include interest rates and yield curves observable at commonly quoted intervals, volatility, loss ratio, credit risks and default percentages.

This category primarily includes:

- Financial instruments: unlisted fixed-interest preference shares and interest rate contracts;
- Financial instruments: loans and receivables (excluding mortgage loans)';
- Other financial assets and liabilities.

Level 3: Fair value not based on observable market data

The fair value of the level 3 assets and liabilities are determined in whole or in part using a valuation technique based on assumptions that are not supported by prices from observable current market transactions in the same instrument and for which any significant inputs are not based on available observable market data. The financial assets and liabilities in this category are assessed individually.

Valuation techniques are used to the extent that observable inputs are not available. The basic principle of fair value measurement is still to determine a fair, arm's length price. Unobservable inputs therefore reflect management's own assumptions about the assumptions that market participants would use in pricing the asset or liability (including assumptions about risk). These inputs are generally based on the available observable data (adjusted for factors that contribute towards the value of the asset) and own source information.

This category primarily includes:

- I. Financial instruments: private equity investments (or private equity partners) and real estate equity funds third parties;
- II. Financial instruments: loans and receivables – mortgage loans, and mortgage equity funds;
- III. Investment property, real estate equity funds associates and buildings for own use;
- IV. Financial instruments: asset-backed securities.

D.1.2 Assets per asset category

The balance sheet reports specify different asset categories. In this section, we describe the valuation of each material asset category. The figures correspond to the extended balance sheet which has been reported as QRT S.02.01.

1. Deferred acquisition costs

Not applicable for a.s.r. health supplementary.

2. Goodwill and Intangible assets

Not applicable for a.s.r. health supplementary.

3. Deferred tax

The basis for the DTA / DTL position in the IFRS balance sheet is temporary differences between fiscal and commercial valuation. This DTA / DTL position is the base for this line item on the Solvency II balance sheet, adjusted for Solvency II revaluations, such as revaluation of technical provisions. The deferred tax effects involve a correction related to the fact that (most of) the revaluations as described in this chapter are gross of tax. The tax effect is calculated at 25.8%.

In accordance with the Delegated Regulation and the recommendations of DNB, netting is only allowed with same tax authority and with same timing. The balance sheet of a.s.r. health supplementary contains a DTL.

4. Property plant, and equipment held for own use

Not applicable for a.s.r. health supplementary.

5. Investments - Property (other than for own use)

Not applicable for a.s.r. health supplementary.

6. Investments – Equity

Valuation of listed equities is based on the level 1 method of the fair value hierarchy. Unlisted fixed-interest preference shares are valued based on the level 2 method of the fair value hierarchy. The valuation techniques for financial instruments start from present value calculations; derivatives are valued based on forward-pricing and swap models. The observable market data contains yield curves based on company ratings and characteristics of unlisted fixed-interest preference shares. The main non-observable market input for private equity investments is the net asset value of the investment as published by the private equity company (or partner).

Valuation of private equity investments is based on the level 3 method of the fair value hierarchy. The main non-observable market input for private equity investments is the net asset value of the investment as published by the private equity company (or partner).

7. Investments – Bonds

The valuation of these assets is consistent with the IFRS fair value hierarchy as described in paragraph D.1.1.

8. Investments – Derivatives

The valuation of these assets is consistent with the fair value hierarchy as described in paragraph D.1.1. The valuation of listed derivatives is based on the level 1 method of the fair value hierarchy. The valuation of unlisted interest rate contracts is based on the level 2 method of the fair value hierarchy. The valuation techniques for financial instruments start from present value calculations; derivatives are valued based on forward-pricing and swap models. The observable market data contains yield curves based on company ratings and characteristics of unlisted fixed-interest preference shares.

9. Unit-linked investments

Not applicable for a.s.r. health supplementary.

¹ Not measured at fair value on the balance sheet and for which the fair value is disclosed.

10. Loans and mortgages

Not applicable for a.s.r. health supplementary.

11. Reinsurance recoverables

Not applicable for a.s.r. health supplementary.

12. Cash and cash equivalents

The valuation of cash and cash equivalents is based on the level 1 method of the fair value hierarchy. Cash and cash equivalents include cash in hand, deposits held at call with banks, cash collateral and other short-term highly liquid investments with original maturities of three months or less.

13. Any other assets, not elsewhere shown

The valuation of these assets is based on the IFRS fair value hierarchy as described in paragraph Section D.1.1. Any other assets, not elsewhere shown include insurance and intermediaries receivables, trade receivables and accrued assets.

D.2 Technical provisions

D.2.1 Introduction

In this section, the policies regarding methodology and assumptions for the technical provisions are described. These liabilities arise from insurance contracts issued by a.s.r. health supplementary.

D.2.2 Technical provisions methods

D.2.2.1 Medical expense insurance

What follows is a description of the policies, methods and principal assumptions that were decisive in determining the value of the technical provisions and the risk margin.

Composition of homogeneous risk group a.s.r. health supplementary

A homogeneous risk group (HRG) encompasses a collection of policies with similar risk characteristics as stipulated by Solvency II, which are generally recorded separately. In a.s.r. health supplementary coverages are similar over labels and distribution channels. Also, the policies in a.s.r. health supplementary are sold in combination with policies of a.s.r. health basic. Therefore, also one HRG is defined in a.s.r. health supplementary.

Contract boundary

The government decides on the basic health insurance package every year and this package is mandatory for all inhabitants of The Netherlands. The composition of this package may be different from year to year. In addition, the contract boundary of an insurance contract is just one calendar year which is laid down in law. The supplementary health insurance has also a contract boundary of one year because it is a combination with the basic health insurance. Insured persons are free to accept or reject a new offer from their health insurer after one year. The composition of the portfolio changes mainly because of insured persons switching health insurers. Claims incurred during the period of cover continue to be insurance liabilities for the covering health insurer. The insurance portfolio and hence the risk profile stays stable during one year, because of the breakdown by claim year.

Risk equalisation model

The Dutch Health Insurance is laid down in law (Zvw¹) and is supplemented by a risk equalisation model which is performed by the National Health Care Institute (ZINL) for a.s.r. health basic. This is not applicable for a.s.r. health supplementary.

D.2.2.2 Bases and methods

Best estimate claim provision a.s.r. health supplementary

The inflation method is used for the first months of the new year because little is known about the use of health care and its declaration pattern of the new year. The inflation rate is based on the existing contracts from the previous year which are under negotiation for new year and market rates for health care consumption.

The outstanding claims provisions for additional health insurance are determined using a development factor model in combination with the Bornhuetter-Ferguson method for each claim year at the aggregated level including all health services and products.

For the current claim year, an estimation is made on the basis on an expected loss methodology. Until enough claims are booked to switch to an estimation based on the chain ladder method. In practice, this number of claims is reached by the end of the first half year.

The best estimate claims provision is discounted at the interest rate term structure (zero coupon curve) prescribed by EIOPA. The prevailing yield curve is set internally at group level.

Cash flows

The cash flow pattern of the claim provisions is based on the history of paid claims including expert judgements for the most recent information in a chain ladder model at the level of health aggregated per year and quarter.

¹ Zvw: Zorgverzekeringswet.

Best estimate of premium provision a.s.r. health supplementary

The best estimate for the premium provision is determined using estimated future cash flows from portfolio growth, premium income (only a commercial premium for a.s.r. health supplementary), claims payments and claims handling costs as included in the premium determination and sales results for the new insurance year. This relates to the next 12-month insurance period (one-year contract boundary) and serve as the benchmark for the scale of the premium provision on the reference date.

The cash flow pattern of the future claim provision is based on paid claims in a chain ladder model. The assumptions are:

- Claims received in past months are predictive for the future payment pattern of claims.
- The payment patterns are constant / equal divided for the coming months to year end.
- The payment pattern for the future claims is equal to the payment pattern of the current (already) paid claims.

The same yield curve, which a.s.r. sets internally at group level and subsequently supplied to the supervised entity, is used as for the outstanding claims provisions.

Claim handling costs a.s.r. health supplementary

The cash flows for claims handling costs are proportional to the cash flows of the paid claims for the claim provisions.

The percentage of claim handling costs is equal to the ratio 'released claims handling costs at the end of year T-1 divided by paid claims including own risk at the end of year T-1 independent of claim years. This fixed percentage is applied to the outstanding claims provision for the current year in the reporting period (t) and for earlier years (t-1, t-2, ..., t-n), and to the outstanding claims provision for future years in earlier years. The result is a provision for claims handling costs. The provision for claims handling costs is included in the best estimate for the outstanding claims and premium provisions. The remaining (other) costs are paid uniformly in a year.

Risk margin methodology

The insurance risks have been determined in accordance with the standard formula described in the Delegated Regulation. a.s.r. group applies the Cost of Capital method that is applicable to a.s.r. health basic and a.s.r. health supplementary as well with a Cost of Capital rate of 6%.

Solvency II describes 4 methods to calculate the risk margin. a.s.r. group has chosen to use the alternative method 1. This method calculates the required future capitals by an approach per risk (sub) module. An approach can of course also be the full calculation of the risk module. The required capital uses the SCR for non-hedgeable risks type 2.

Impact volatility adjustment

a.s.r. health supplementary applies the volatility adjustment for discounting cash flows to determine the best estimate and in determining the Required Capitals for the SCR. In the next table the impact is shown of this volatility adjustment on the financial position and own funds of a.s.r. health supplementary.

Impact of applying VA = 0 bps

	VA = 19 bps		VA = 3 bps		VA = 0 bps		Impact	
	31 December 2022	31 December 2021	31 December 2022	31 December 2021	31 December 2022	31 December 2021		
TP	-4,442	-4,118	-4,438	-4,117	5	1		
SCR	17,496	15,332	17,496	15,332	0	0		
MCR	4,374	4,335	4,374	4,335	0	-		
Basic own funds (total)	25,294	33,060	25,291	33,059	-3	-0		
Eligible own funds	25,294	33,060	25,291	33,059	-3	-0		

D.2.3 Level of uncertainty

a.s.r. distinguishes between two sources of uncertainty with regard to the level of the technical provisions. These sources are model risk and process risk. The uncertainty associated with these risks has been mitigated as described below.

Process risk

The process risk is mitigated using the Risk Control Matrix (RCM), which creates a reasonable degree of assurance as to the reliability of financial reports. Key controls have been identified and to a larger extend implemented for the calculation process. In addition, the effectiveness of the RCM framework is verified by an independent party and supplementary checks are performed where needed. As part of RCM or the additional checks, the four-eye principle has demonstrably been applied to the calculation of the technical provision.

Model risk

The second risk that a.s.r. has identified in relation to the technical provisions is model risk. Regular procedures have provided adequate certainty with regard to this risk. To illustrate, the reporting manager in charge signs off documents to demonstrate that the reported figures do not contain any material mistakes or that no key facts have been omitted. In addition, FRM, in its role as the second line of defence, performs an independent internal review of the technical provisions as described in the previous phase.

D.2.4 Reinsurance and special purpose vehicles (SPVs)

Not applicable for a.s.r. health supplementary.

D.2.5 Technical provisions

In this table a reconciliation is made between the Solvency II and the IFRS valuation of provisions. Solvency figures are part of the balance sheet S.02.01. The next paragraph describes a brief explanation of these differences.

Technical provisions: IFRS versus Solvency II

31 December 2022	IFRS	Revaluation	Solvency II
Similar to non-life			
Best estimate	-		-5,634
Risk margin	-		1,192
Technical provision	4,214	-8,657	-4,442

D.2.6 Reconciliation between IFRS and Solvency II

Under Solvency II, the technical provisions are calculated using a different method compared to IFRS. In this section the reconciliation between IFRS and Solvency II is described per business line.

Similar to Non-life

The revaluation for Similar to Non-life (medical expense) is caused by:

- The IFRS LAT margin: € 8,657 thousand.

The technical provisions under IFRS contains a prudence margin of 15%.

D.3 Other liabilities

D.3.1 Valuation of other liabilities

In line with the valuation of assets, the accounting principles for other liabilities used in the Pillar III reports are generally also based on the IFRS as adopted by the EU. Any differences between the valuation methods for IFRS and Solvency II purposes are addressed in detail per liability category. In this paragraph line items 18-21 from the simplified balance-sheet above are described.

18. Pension benefit obligations

Not applicable for a.s.r. health supplementary.

As of 1 January 2021 a defined contribution plan is in place. The existing defined benefit plan has ended and will not be renewed. The accrued pensions (until 1 January 2021) will remain guaranteed at a.s.r.

life and are not transferred to the defined contribution plan. The plan amendment is recognised directly through profit of loss.

19. Deferred tax liabilities

See 3. Deferred tax assets.

20. Subordinated liabilities

In IFRS the perpetual hybrid loans are classified as equity as there is no requirement to settle the obligation in cash or another financial asset or to exchange financial assets or financial liabilities under conditions that are potentially unfavourable for a.s.r. health supplementary According to IFRS, the perpetual hybrid loans are measured at amortized cost. For the purpose of Solvency II, they are both measured at fair value.

Directed by the regulator in Solvency reporting the perpetual hybrid loans are classified as subordinated liabilities.

21. Other liabilities

Other Liabilities contains different small line items:

Insurance and Intermediaries payables

The valuation of these liabilities follows the Solvency II fair value hierarchy as described in paragraph D.1.1 This category is subject to the same valuation as the asset category Cash and Cash equivalents.

Trade payables (non-insurance)

The valuation of these liabilities follows the Solvency II fair value hierarchy as described in paragraph D.1.1 This category is subject to the same valuation as the asset category receivables.

Any other liabilities not disclosed elsewhere The valuation of these liabilities follows the Solvency II fair value hierarchy as described in paragraph D.1.1. This item consists primarily of tax payables.

Contingent liabilities

Contingent liabilities are defined as: a possible obligation depending on whether some uncertain future event occurs, or a present obligation but payment is not probable or the amount cannot be measured reliably.

Contingent liabilities are recognised on the IFRS balance sheet if there is a probability of >50% that the contingent liability leads to an "outflow of resources". These liabilities are also recognised on the Solvency II balance sheet.

Solvency II prescribes that all contingent liabilities be recognised on the Solvency II balance sheet. This covers cases where the amount cannot be measured reliably or when the probability is <50%. For these

cases, a regular process is in place to determine whether contingent liabilities should be recognized on the Solvency II balance sheet.

The a.s.r. health supplementary solvency ratio does not include contingent liabilities.

D.3.2 Reconciliation from Solvency II equity to EOF

The differences described in the above sections are the basis for the reconciliation of IFRS equity to equity Solvency II.

To reconcile from Solvency II Equity to EOF, the following movements are taken into consideration:

Subordinated liabilities

In accordance with the Delegated Regulation the subordinated liabilities are part of the EOF. Further information of this liabilities is described in section E.

Foreseeable dividends and distributions

Not applicable for a.s.r. health supplementary.

Deductions for participations in financial and credit institutions

Not applicable for a.s.r. health supplementary.

Tier 3 Limitations

In accordance with the Delegated Regulation EOF is divided in tiering components. There are boundary conditions related to the size of these components. Excess of this limits results in capping of EOF. For a.s.r. health supplementary capping does not apply per year-end 2022.

The above mentioned movements are not applicable for supplementary health insurance. As a result the Excess of assets over liabilities, is equal to EOF.

D.4 **Alternative methods for valuation**

a.s.r. health supplementary does not apply alternative methods for valuation.

D.5 **Any other information**

Not applicable for a.s.r. health supplementary.

E Capital management

Key figures

Eligible own funds

SCR

The solvency ratio stood at 145% as per 31 December 2021 based on the standard formula as a result of € 25,294 thousand EOF and € 17,496 thousand SCR.

Reconciliation total equity IFRS vs EOF Solvency II

The replacement of the IFRS provision for the best estimate and risk margin, increases the eligible own funds by € 6,423 thousand. This is after tax-impact of 25.8%.

An extensive explanation of the reconciliation from IFRS equity to Solvency II eligible own funds was presented in section D.3.2.

E.1 Own funds

E.1.1 Capital management objectives

Management

Overall capital management is administered at group level. a.s.r. currently plans to consider investing capital above the Solvency II ratio (calculated based on the standard formula) of 160% (management threshold level) with the objective of creating value for its shareholders. If and when a.s.r. operates at a level considerably above the management threshold level and it believes that it cannot invest this capital in value-creating opportunities for a prolonged period of time, it may decide to return (part of this) capital to shareholders. If a.s.r. chooses to return capital, it plans to do so in a form that is efficient for shareholders at that time. a.s.r. actively manages its in-force business, which is expected to result in free capital generation over time. Additionally, business improvement and balance sheet restructuring should improve the capital generation capacity while advancing the risk profile of the company. The legal entities are individually capitalised and excess capital over management's targets for the legal entities is intended

to be up-streamed to the holding company as far as is needed for amongst others covering external dividend, coupon payments on hybrids/senior financing instruments and holding costs and in so far the local regulations and the internal risk appetite statement allow.

Objectives

The group is committed to maintain a strong capital position in order to be a robust and sustainable insurer for its policyholders and other stakeholders. The objective is to maintain a solvency ratio well above the minimum levels as defined in the risk appetite statements and above the relevant management threshold levels. Sensitivities are periodically performed for principal risks and annual stress tests are performed to test a.s.r.'s robustness to withstand moderate to severe scenarios. An additional objective is to achieve a combination of a capital position and a risk profile that is at least in line with a "single A" rating by Standard & Poor's.

The SCR is reported on a quarterly basis and proxies are made on both a monthly and weekly basis. The internal minimum solvency ratio for a.s.r. health supplementary as formulated in the risk appetite statement is 110%. The lower limit solvency target is 125%. The management threshold level for the solvency ratio is above 140%. The solvency ratio stood at 145% at 31 December 2022, which was comfortably above the internal requirement of 110% and the management threshold level of 140%.

In accordance with a.s.r.'s dividend policy, the liquidity of the underlying entities is not taken into account for the liquidity position of the group. However, the capital is recognised in the capital position of the group, since a.s.r. has the ability to realise the capital of this OTSO, for example by selling the entity.

If a.s.r. health supplementary elects to return capital, it intends to do so in the form that is efficient for shareholders at that time. In 2022, € 10 million dividend upstream took place.

The graph below shows how the eligible own funds of a.s.r. health supplementary relate to the different capital targets.

Market value own funds under SCR

E.1.2 Tiering own funds

The table below details the capital position of a.s.r. health supplementary as at the dates indicated.

With respect to the capital position, Solvency II requires the insurers to categorise own funds into the following three tiers with differing qualifications as eligible available regulatory capital:

- Tier 1 capital consists of Ordinary Share Capital and Reconciliation reserve.
- Tier 2 capital consists of ancillary own funds and basic Tier 2. Ancillary own funds consist of items other than basic own funds which can be called up to absorb losses. Ancillary own fund items require the prior approval of the supervisory authority. a.s.r. health supplementary has no ancillary or basic Tier 2 own fund items.
- Tier 3 consists of Deferred tax assets. a.s.r. health supplementary has no Tier 3 own fund items. a.s.r. health supplementary has a deferred tax liability of € 2,431 thousand.

The rules impose limits on the amount of each tier that can be held to cover capital requirements with the aim of ensuring that the items will be available if needed to absorb any losses that might arise.

Eligible Own Funds to meet the SCR

	31 December 2022	31 December 2021
Tier 1 capital - unrestricted	25,294	33,060
Tier 1 capital - restricted	-	-
Tier 2 capital	-	-
Tier 3 capital	-	-
Eligible own funds to meet SCR	25,294	33,060

E.1.3 Own funds versus MCR

The MCR calculation is based on the standard formula.

Eligible Own Funds to meet the MCR

	31 December 2022	31 December 2021
Tier 1 capital - unrestricted	25,294	33,060
Tier 1 capital - restricted	-	-
Tier 2 capital	-	-
Tier 3 capital	-	-
Eligible own funds to meet MCR	25,294	33,060

The eligible own funds to meet the MCR equal the eligible own funds to meet the SCR, as there is no Tier 2 and Tier 3 capital.

According to Delegated Regulation article 248 to 251 the MCR (€ 4,374 thousand) of a.s.r. health supplementary is calculated as a linear function of premiums, technical provisions and capital at risk.

E.1.4 List of hybrid loans

a.s.r. health supplementary has not issued any hybrid loans.

E.2 Solvency Capital Requirement

The required capital stood at € 145% thousand per 31 December 2022. The required capital (before diversification) consists for € 16,778 thousand out of insurance risk, € 2,637 thousand relates to operational risk and market risk amounted to € 1,739 thousand at 31 December 2022.

a.s.r. health supplementary complied during 2022 with the applicable externally imposed capital requirement. The table below presents the solvency ratio as at the date indicated. The Solvency II ratios presented are not final until filed with the regulators.

Eligible own funds to meet the SCR

	31 December 2022	31 December 2021
Eligible Own Funds Solvency II	25,294	33,060
Required capital	17,496	15,332
Solvency II ratio	145%	216%

Under Solvency II it is permitted to reduce the required capital with the mitigating tax effects resulting from a 1-in-200-year loss ("Shock loss"). There is a mitigating tax effect to the extent that the Shock loss (BSCR + Operational risk) is deductible for tax purposes and can be compensated with taxable profits. This positive tax effect can only be taken into account when sufficiently substantiated ('more likely than not'). a.s.r. included a beneficial effect on its solvency ratio(s) due to the application of the LAC DT. The LAC DT benefit is € 2,591 thousand.

a.s.r. uses an advanced model for the LAC DT of both a.s.r. life and a.s.r. non-life and a 'basic' model for a.s.r. health basic and supplementary. In the advanced model future fiscal profits are used to underpin the LAC DT, while in the basic model no future profits are used. Both models are and will be updated in case constrained by additional guidance or legislation provided.

On 22 September 2021 the European Commission published its proposal for the revision of Solvency II. It consists of various changes to the Solvency II framework, affecting most notably the liability discount curve, the risk margin and the volatility adjustment (VA). In July 2022, the Council reached an agreement on their common position. The Parliament has tabled many amendments and will vote on their final position in early 2023. The next step then is for the European Parliament, the Council to negotiate the final legislative texts of the revision of Solvency II. It is expected that the changes will come into effect in 2025 at the earliest and that some measures will include a phase-in period. Quantitative impact of the EC proposal has been analysed and appears to be more favourable compared to the earlier EIOPA advice, but a conclusion is only possible after specifications have been finalised.

E.3 Use of standard equity risk sub-module in calculation of Solvency Capital Requirement

The transitional measure for equity risk applies for shares in portfolio at 01-01-2016 and ended per 31 December 2022. The SCR equity shock is 22% at 01-01-2016, and linear increasing to (i) 39% + symmetric adjustment for type I shares and (ii) 49% + symmetric adjustment for type II shares.

E.4 Differences between Standard Formula and internal models

a.s.r. solvency is governed by a standard formula, rather than the self-developed internal model. The EB believes that this should enhance transparency and consistent interpretation.

E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

As a.s.r. health supplementary has not faced any form of non-compliance with the Minimum Capital Requirement or significant non-compliance with the Solvency Capital Requirement during the reporting period or at the reporting date, no further information is included here.
